PREFACE

The Department of Census and Statistics (DCS) conducted its first Economic Census in 2013/14, replacing the Census of Industries and Census of Agriculture. The purpose of undertaking the Economic Census - 2013/2014 is to collect information on the nature, structure and performance of the economic activities undertaken within the country's territory. The Economic Census is a primary source of these basic statistics, covering not only the units in the formal sector but in the informal sector as well. This information is the basis of all national and sub-national level development plans and policies. The listing operation of the Economic Census 2013/2014 revealed the distribution of the economic units in the country and this was used to build a Statistical Business Register for the country. And this will be used as a frame for the economic surveys in the future. Recognizing its importance in the national development process, the Department of Census and Statistics is firmly committed to ensure the quality and utility of the Economic Census 2013/2014.

This report provides the results of the data analysis related to the formal establishments in the country. This report presents data at sub national and economic activity level which would be useful for policy makers and economic planners of the country. It is a valuable document for government institutions at different administrative levels, economists, researchers and others, who are working for and interested in the industry sector of the country.

EXECUTIVE SUMMARY

Economic Census is an integrated programme of data collection and compilation aimed to provide comprehensive source of statistical information for economic and social development planning. In Sri Lanka the agriculture and industry sectors of the economy were covered separately through two distinct censuses namely Census of Agriculture and Census of Industries once in ten years during 1952-2003. The service sector is a fast growing sector in the economy and it had not been fully covered in any censuses or surveys to provide statistics till 2013. The demand for data on the services sector from the government and private organizations emerged substantially. Therefore, Economic Census conducted in 2013/14 to fulfil above data gap and it was conducted in two phases; phase I is the listing phase in which all the economic activities excluding the government sector were listed out. Economic units were subdivided in to three sectors namely; formal industry sector, formal Trade and services sector and informal sector. The second phase was the detail data collection phase and at this phase data collection was done considering these sectors for the reference year 2013.

This report provides the findings of the data analysis based on the data collected from the formal industrial establishments. (Industries which have documented accounts and with more than 10 employees or incorporated). The finding reveal that there are 5,616 formal industries and most of them are belong to the manufacturing sub sector (5,114) followed by 378 formal industries in the mining and quarrying sub sector. It reveals that there are 76 formal industries in the electricity, gas, steam and air conditioning supply sub sector and 48 formal industries in the water supply, sewerage, waste management and remediation activities sub sector respectively. The distribution of formal industries by geographic sector reveals that more than half (60.2%) of the formal industries are located in the rural sector while 36.0% are in the urban sector and the balance 3.8% of the formal industries are located in the estate sector.

It is reported that 916,168 persons are engaged in the formal industries in the country. The highest number (860,075) of persons is involved in the manufacturing sector industries. Of this 26,874 persons, are involved in formal industries of Mining and Quarrying sub sector. Number of persons engaged in formal industries related to electricity, gas, steam and air conditioning supply is 18,100 and the number of persons engaged in water supply, sewerage, waste management and remediation activities are reported as 11,119.

The industrial output from the formal industries is estimated as Rs. Bn 3,757 and estimated Intermediate consumption is Rs. Bn 2,144, resulting the total value added is Rs. Bn 1,612.6. Gross addition to fixed assets from the formal industries is Rs. Bn 155.2 and Salary and Wages of this sector is Rs. Bn 290. Manufacturing sector is the largest sub sector in the industrial sector of the country, and it's share in the total industrial establishments is 91.1% and the persons engaged in this sub sector are 93.9% to the total number of persons engaged in the formal industries. The industrial output from the formal manufacturing industries is Rs. Bn 3,204.2 (85.3%). Intermediate consumption and value added of the manufacturing industries are Rs. Bn 1,896.8 (88.5%) and Rs. Bn 1,307.3 (81.1%) respectively.

Chapter 1 Introduction

1.1 BACKGROUND

Economic Census is an integrated programme of data collection and compilation aimed at providing comprehensive source of statistical information for economic and social development planning. Economic Census provides detail statistics which are important for the formulation of policies for the development of a country. In Sri Lanka the agriculture and industry sectors of the economy were covered in censuses from 1952-2003. Two distinct censuses namely Census of Agriculture and Census of Industry were conducted once in ten years. Before the Economic Census was conducted, the last censuses on these sectors were conducted in 2002 and 2003 respectively.

The fast growing services sector in the economy had not been covered in any census or survey operation for providing statistics till 2013. The demand for data on the services sector from the government and private organization emerged substantially. Therefore Department of Census and Statistics (DCS) as the main government agency for providing official statistics decided to conduct an Economic Census including services sector too in 2013. This report provides the valuable information on formal industry sector of the economy of Sri Lanka. Other two reports on services and informal sector will be released soon.

Economic Census 2013/14 was conducted in two phases; one is the listing phase in which all the economic activities excluding the government sector were listed out. At the second phase, all the establishments listed out at the listing stage were grouped in to two; large and other establishments. All the large establishments and a sample of others were canvassed for detail data on the economic activity, establishment profile, business revenue and expenditure as well as employment details, for the reference year 2013/14. This report presents the results of the industrial sector on the detail data collection phase.

1.2 OBJECTIVES

The objectives of the Economic Census are

- To provide measures of key statistics of industry, trade and services.
- To provide measures that would serve as “bench mark” for other surveys
- To identify the structure of the industry, trade and services sectors.
- To ensure that the compilation of industrial statistics in Sri Lanka falls in line with the concepts and standards of international recommendations.

1.3 SCOPE AND COVERAGE

All economic activities excluding the government sector establishments were listed out at the

listing stage. Large industries of government sector were also canvassed along with the listed industries for detail data at the second stage.

The International Standard Industrial Classification (ISIC) Revision 4 of the United Nations was localized for the convenience of identifying specific industries in the country. Sri Lanka Standard Industrial Classification (SLSIC) was used to classify the economic activities.

Chapter 2 Methodology

For collecting detail data related to the industrial activities the industries were divided in to two sectors as formal and informal in the following way. To be a formal establishment it should have documented accounts keeping with either more than 10 persons engaged in or incorporated. All the others are considered as informal industrial establishments.

The large industries with more than 100 employees and a few identified rare industries were taken for the full enumeration while other formal industries that industries with more than 10 persons engaged or incorporated and maintaining accounts documentation are covered by a representative sample.

2.1 THE QUESTIONNAIRE

Number of meetings were held with the data users of the economic sector and the questionnaire was designed in the following structure.

Section no. Data Collected

1	Identification information
2	Employment, Salary and wages
3-4	Output and Intermediate consumptions
5	Fixed Assets
6	Industry related other data

The gross output was compiled collecting the data on

- The value of products moved out
- Receipts from industrial and non-industrial services done for others
- Opening and closing stocks of output
- Opening and closing stocks of work-in-progress
- Own account fixed assets

In order to calculate the intermediate consumptions, data was collected on

- Addition of value of raw materials consumed for the year 2013, (i.e. Cost of raw materials adjusted for stocks)
- Consumption of electricity, fuel and water.
- Cost of industrial and non-industrial services for the establishment

Book value at the beginning of the year, Gross additions during the year, Own account fixed assets and Depreciation were canvassed under the two major components of fixed assets namely, tangible fixed assets and intangible fixed assets. Data of the following six components was collected under the tangible fixed assets.

- Land
- Buildings and Other Constructions
- Plant and Machinery
- Transport Equipment
- Computer and Accessories
- Furniture & Other Office Equipment etc.

In addition, value of the computer software and data base, entertainment, literary or artistic originals, non-produced intangible fixed assets like good will, trade mark were collected under the intangible fixed assets.

Data on employment and earnings were collected under two sub categories Nationals and Non-nationals. The number of male and female national persons engaged was collected separately, but salaries were canvassed only for the total number of employees. In addition to the above, non-national employees and their salaries also were canvassed.

2.2 DATA COLLECTION

The collection of accurate data from establishments is very tedious and time consuming task. Sometimes officers had to visit them several times in order to get a good response.

2.3 REFERENCE PERIOD

Reference period of the census was the calendar year 2013 (i.e. 1st of January to 31st of December). But in some cases, establishments keep records not for the calendar year but for the financial year. (1st of April 2013 to 31st of March 2014) In those situations, financial year data were accepted when there were no significant differences between two first quarters of both years (2013 and 2014). Otherwise estimates for the calendar year were accepted.

2.4 SURVEY DESIGN

Enumeration method was mainly designed to be carried out in two ways; complete enumeration

and partial enumeration. Under complete enumeration all the establishments, which are coming under the pre-defined criteria as large establishments were enumerated. Large were defined for the enumeration phase of non-agricultural establishments under Economic Census 2013/14, in the following way

- Large establishments; establishment with more than 100 persons engaged

And some industries which are rare are also considered for complete enumeration to prevent the chances of the industry excluded at the sampling

- Rare industries which appears less than 5 at SLSIC 4-Digit by District level and 5-Digit by National level

Partial enumeration was done using a sample out of the establishments, which are not selected to complete enumeration.

Sampling Plan

Method: Stratified Random

Sampling Technique

Selected Strata

- Industry sub sector
- District
- SLSIC Code
- Class size – Person Engaged

Units were selected using systematic method.

(a) Determination of weights

Theoretical Background

The final weight for k^{th} respondent in the stratum h , w_{hk} , is a composite of the base weight; w_{1hk} , the non-response adjustment; w_{2hk} and the factor to compensate for coverage errors; w_{3hk} such that,

$$w_{hk} = w_{1hk} \times w_{2hk} \times w_{3hk} \quad (1)$$

Base weight (w_{1hk})

The base weight is the reciprocal of the probability of selection to the sample. Therefore, it requires an adjustment factor to be incorporated in the weight. To illustrate, if N_h is the population size for stratum h and n_h is the corresponding sample size,

$$\text{Then the base weight, } P_h = \frac{N_h}{n_h}$$

Non-response weight (w_{2hk})

The non-response weight is the ratio of the sample size to the total respondents. The establishments that were considered as non-respondents are those who refused to participate in the survey.

$$\text{Non-response weight, } w_{1hk} = \frac{n_h}{n_{*h}}$$

Here n_{*h} is the number of responded establishment in h^{th} stratum.

Sampling Frame Error weight (w_{3hk})

The followings are the influencing factors on frame errors.

- Establishments that cannot be located

- Establishments, which were closed (they should not be included in the sampling frame)
- Establishments, which are out-of-scope (the ISIC classification was not specified correctly)
- Establishments, which were duplicates and mergers.

If given the stratum h ,

q_{1h} - Proportion of establishments with frame problems (proportion of those that should not be included in the frame)

q_{2h} - Proportion of establishments that were missed in the frame (those that should be listed but were not included)

Then the true population size of stratum h ; N'_h should be,

$$N'_h = N_h \times (1 - q_{1h} + q_{2h})$$

Hence the frame adjustment weight; w_{3hk} is,

$$w_{3hk} = (1 - q_{1h} + q_{2h})$$

(b) Estimation

Estimates for each of the strata described above could be derived separately.

$$\text{From (1), } w_{hk} = w_{1hk} \times w_{2hk} \times w_{3hk}$$

The estimate for a total in stratum h is given by,

$$\hat{y}_h = \sum_{k=1}^{n_h} w_{hk} y_{hk}$$

Where, $k = 1, 2, 3, \dots, n_h$

n_h = Number of units in stratum h

y_{ijk} = Observed value of considered variable for k^{th} unit in stratum h

Chapter 3 Concepts and Definitions

The concepts and definitions used in Economic Census 2013/14 were broadly in accordance with the United Nations recommendations.

3.1 STATISTICAL UNIT

Statistical unit of Economic Census is the establishment which is defined as a unit engaged in single or related activities of Industry, Trade and Services activities in one location under a single ownership or control.

However, industrial enterprises, which are engaged in production of more than one related activity in one location or one activity in several locations, were treated as one unit of enumeration whenever no separate records are available.

Any way in the analysis, the ideal definition of the establishment was followed. Data collected at enterprise level was disaggregated into establishment level using the proportion of output. Ancillary units such as warehouses, garages, etc. were treated as part of the main establishments.

3.2 FORMAL ESTABLISHMENT

Formal establishment is defined as the establishments which has

01. Documented account **and**
02. Number of persons engaged more than 10 **or** being incorporated.

Incorporated establishments are all public limited companies, all Private limited companies and offshore companies. In addition to above, branches of foreign companies and co-operative societies are considered as formal establishments.

3.3 OUTPUT

Data on output has been collected on shipment basis. The variables canvassed were the value of products moved out from the establishment, value of stocks of finished goods and receipts from industrial and non-industrial services rendered to others.

(a) Value of products moved out

In order to calculate the product made by the establishment, following two situations are considered.

- i. Value of products made by the establishment using its own raw materials
- ii. Products made by another establishment using material inputs owned by the establishment

Following three situations are considered as the moving out.

- i. Sending to another establishment or a person
- ii. Sending to another branch of the same enterprise
- iii. Sending abroad

The valuations of all products moved out should be done as per basic prices. Basic price is the

amount receivable by the producer for units of a good or services produced as output, minus any tax payable and plus any subsidy receivable by the producer as a consequence of its production or sale. It excluded any transport charges. Price rebates, discounts and allowances on returned goods allowed to the customer, should be deducted. Transfer of goods released to other establishments in the same enterprise, should be treated as the through sold and valued at basic price.

(b) Stocks of finished goods

The values of stocks of finished goods at the beginning and at the end of the year 2013 have been collected.

This consists of all finished goods made by the establishment using their own raw materials and manufactured by another establishment using raw materials owned by this establishment and ready for release. Finished goods held by the establishment which were made from materials owned by others have been excluded. Valuation is in basic prices.

(c) Receipts from industrial services

Following work are considered to calculate the total value of industrial services.

- Contract and Commission work done for others on materials owned by them
- Repairs and installation work done for others

(d) Value of output

The value of output was obtained from the value of shipments, value of own account capital formations and receipts of industrial and non-industrial services adjusted for changes in inventories of finished goods and change in work-in-progress during the reference period.

Value of products moved out	
changes in inventories of finished goods	+
Receipts from Industrial Services	+
Own account capital formation	+
Other Revenue	+
Value of output	

3.4 INTERMEDIATE CONSUMPTIONS

Information on intermediate consumptions has been collected covering the costs of following factors.

(a) Cost of raw materials, parts and components and packing materials

Cost of raw materials and packing materials purchased: All material inputs (Raw materials,

Parts, components containers and supplies) purchased by the establishment for the production process either in this establishment or in another establishment have been included. All materials have been valued at purchaser's prices.

That is delivered value at the establishment, including the purchase price transport charges, cost of insurance, all taxes and

duties on the goods. Discounts or rebates allowed to the purchaser and the value of packing materials returned to the supplier have been deducted.

The value of materials owned by others and received by the establishment for production process have been excluded and material inputs received by the establishment from other establishments of the same enterprise (not purchased) for processing have been valued as if purchased.

Values of stocks of raw materials and packing materials etc. : The opening and closing stocks of

all input materials (imported and indigenous) including packing materials which are purchased (or treated as purchased) have been included.

The valuation was at purchaser's prices. The stocks of raw material used for own account work for producing own fixed assets have been excluded.

(b) Cost of industrial services done by others:

Following work are considered to calculate the Cost of industrial services done by others.

- Contract and commission work done by others on materials supplied by the establishments
- Repairs and maintenance services provided by others are included.

(c) Fuel, electricity and water consumed

The total of the values of Fuel (LP Gas, Coal and Charcoal, Petrol, Diesel Oil, Furnace Oil,

Kerosene Oil, Firewood and others) Electricity and Water consumed has been included.

(d) Raw materials Consumed

Raw materials consumed (i.e. actually used) has been computed by adjusting stocks of raw materials to the total value of raw materials (imported and indigenous) and packing materials purchased.

Raw materials and packing materials purchased	
Change in inventories of materials	+
Raw materials and packing materials consumed	

(e) Value of intermediate consumptions

The total value of raw materials consumed, cost of industrial and non-industrial services done by others and Fuel, Electricity and Water consumed have been defined as the value of Inputs.

Value of raw materials consumed	
cost of industrial services done by others	+
Fuel, Electricity and Water consumed	+
Other Payments	+
Value of intermediate consumptions	

3.5 VALUE ADDED

Value added has been defined as the difference of the value of output and value of intermediate consumptions.

VALUE ADDED	=	OUTPUT	-	INTERMEDIATE CONSUMPTIONS

3.6 FIXED CAPITAL ASSETS

The book value at the beginning of the year, value of gross additions during the year, Value of own account fixed assets and depreciation of all assets with productive life of one year or more, owned by the establishment (i.e. Land, Buildings & Other constructions, Plant & Machinery, Transport equipment, Computer & accessories, Furniture & Other office equipment and intangible fixed assets) have been collected. Leased or rented assets have not been included.

(a) Book value at the beginning of the year

This refers to the original cost price of the item less its depreciation, less assets retired and sold up to the beginning of the year.
