## **Preface**

The Sri Lanka Household Income and Expenditure Survey (HIES) is conducted by the Department of Census and Statistics (DCS) under the National Household Sample Survey Program. The HIES is an year long sample survey which is conducted in 12 consecutive monthly rounds and an island wide representative sample of equal size is enumerated in each monthly round to capture seasonal and regional variations of income, expenditure and consumption patterns. The HIES series which started in 1980 was conducted once in every five years until 2006/07 and thereafter, as rapidly changing economic conditions demanded far more frequent monitoring of income and expenditure patterns in the country, the DCS with the help of the rapid developments in the ICT, decided to conduct the HIES once in every three years in Sri Lanka. The HIES 2009/10 which was conducted three years after the previous survey, HIES 2006/07, is the seventh in the HIES series.

The field data collection of the survey was done in twelve monthly rounds starting from July 2009 to June 2010 and covered all the districts excluding Mannar, Kilinochchi and Mullaitivu districts in the Northern province as post liberation resettlements of internally displaced persons, a situation which is not suitable for conducting an HIES like household survey, were in progress in most of the areas in the three districts during the pre scheduled survey period.

This report is the final report of the HIES 2009/10, which is based on the twelve months rounds of the survey data and publishes much needed socio economic development indicator information of households and household population in Sri Lanka.

D. B. P. S. Vidyaratne  
Director General of  
Census and Statistics

03 August 2011  
Department of Census and Statistics  
15/12, Maitland Crescent  
Colombo 07

## **Acknowledgements**

The HIES, being a report of national stature, receives the cooperation from many quarters including the general public and officers of the DCS. However the names of following persons need to be mentioned in this regard for the valuable contribution they made to make the HIES 2009/10 a success.

Planning and execution of the survey was done by staff of the Samples Survey Division (SSD) under the direction of Mr. W. W. M. A. S. Premakumara, Director (SSD) and the total survey activities were coordinated by Mr. G. Y. L. Fernando, Director (2).

Field data collection activities of the survey were done by Statistical officers and Statistical assistants attached to divisional secretariat divisions and district statistics offices under the direct supervision of Deputy director/ Senior statistician/ Statistician in charge of the respective district statistics offices.

Co-ordination of the field work was done by Statistical Officers, Statistical Assistants, Data entry operators and Coding clerks of the SSD under the supervision of Mr. D. C. A. Fernando, Mr. I. L. Sherifdeen, Mr. H. T. Fonseka, Mr. U. B. Saputhanthri, Ms. A. H. S. P. Gunawardane and Ms. D. D. Deepawansa, Statisticians.

Data entry activities were done by the staff of the Data Processing Division under the direction of Mr. S. A. S. Bandulasena, Deputy Director and Mr. H. O. Chandrathilaka, Deputy director. Mr. W. H. P. W. Weerasiri, Senior Systems Analyst/ Programmer was responsible for the development of data entry programs and overall supervision and guidance of the data entry activities carried out within the district offices as well.

Development of samples selection, data cleaning, estimation and tabulation programs were done by Mr. K. M. R. Wickramasinghe, Assistant director (ICT) attached to the SSD.

This publication was organized and prepared by Ms. M. D. D. D. Deepawansa Statistician and Mr. P. Dharmawardene, Senior statistician, Mr. H. T. Fonseka, Statistician. The staff of the SSD joined the report in preparing various chapters and Mr. K. M. R. Wickramasinghe, Assistant director (ICT) contributed by overall editing of the report.

Printing of the survey materials were done by staff of the DCS Printing Division under the supervision of Mr. W. C. Weerawanse, Senior Statistician.

## Officers engaged in the Survey activities

### Supervision of the survey activities in Sample Survey Division

Mr. C. A. E. R. M. L. Perera	Senior Statistician
Mr. I. L. Sherifdeen	Statistician
Mr. D. C. A. Fernando	Statistician
Mr. P. Dharmawardane	Senior Statistician
Mr. K. M. R. Wickramasinghe	Assistant director (ICT)
Mr. H. T. Fonseka	Statistician
Mr. U. B. Saputhanthri	Statistician
Ms. A. H. S. P. Gunawardane	Statistician
Ms. D. D. Deepawansa	Statistician

### Supervision of the survey activities at District Offices

Colombo	Mr. D. L. R. Wijethunga	Senior Statistician
Gampaha	Mr. J. D. Nandasiri	Senior Statistician
Kalutara	Mr. P. Nandasena	Statistician
Kandy	Mr. H. S. Wanasinghe	Deputy Director
Matale	Mr. A. M. U. K. Alahakoon	Senior Statistician
Nuwara-Eliya	Mr. G. W. Gunasekara	Statistician
Galle	Mr. S. D. Wisumperuma	Statistician
Matara	Mr. M. S. M. Musammil	Statistician
Hambantota	Mr. Sarath Jayasooriya	Statistician
Ampara	Mr. M. S. Sahuthul Kaleem	Statistician
Batticaloa	Mr. M. H. Manzoor	Senior Statistician
Puttlam	Mr. M. J. Marcus Fernando	Statistician
Anuradhapura	Mr. P. S. A. Ariyathilake, Mr. S. L. Mamaduwa	Statistician
Polonnaruwa	Mr. D. L. Edirisinghe	Statistician
Badulla	Mr. A. M. P. Abayasinghe	Statistician
Moneragala	Mr. R. M. Gunadasa	Statistician
Ratnapura	Mr. L. W. Ranjith	Senior Statistician
Kegalle	Mr. C. L. A. K. Hearath	Statistician
Kurunegala	Mr. K. P. K. Dissanayake	Senior Statistician
Jaffna	Mr. S. Udayakumar	Statistician
Vavuniya	Mr. M. Thiyakalingam	Statistician
Trincomalee	Mr. T. Chandran	Statistician

### Manual Editing, Coding and Error Correction etc

Mr. I. H. J. Rohan	Statistical officer
Mrs. Sathyadevi Ranjith	Statistical officer
Mr. K. B. G. U. Jayatissa	Statistical Assistant
Mr. S. Balasankar	Statistical Assistant
Mrs. C. S. Liyanage	Statistical Assistant
Mrs. A. N. Ekanayake	Statistical Assistant
Mrs. S. W. N. D. Attanayake	Data Entry Operator
Miss. G. P. G. N. Y. Dewasurendra	Data Entry Operator / Coding Clerk
Miss. P. R. R. Chamilalatha	Data Entry Operator / Coding Clerk
Miss. M. A. C. G. Priyadhrshani	Data Entry Operator / Coding Clerk
Mrs. Phathima Riyana	Data Entry Operator / Coding Clerk
Miss. M. S. F. Nilamiya	Data Entry Operator / Coding Clerk
Miss. M. G. C. Lakmali	Data Entry Operator / Coding Clerk
Mrs. K. S. de Silva Weeraddana	Data Entry Operator / Coding Clerk
Miss. Y. W. S. Chandralatha	Data Entry Operator / Coding Clerk
Mrs. S. A. S. T. Samaraturunge	Data Entry Operator / Coding Clerk
Miss. G. C. Geekiyanage	Data Entry Operator / Coding Clerk
Miss. K. M. C. P. Kulasinghe	Data Entry Operator / Coding Clerk

## Executive Summary

### Demographic Characteristics

Household population – Sri Lanka	20.3 million
Male population – Sri Lanka	9.7 million
Female population – Sri Lanka	10.7 million
Urban population – Sri Lanka	3.0 million
Rural population – Sri Lanka	16.3 million
Estate population – Sri Lanka	1.0 million
Number of households – Sri Lanka	5.1 million
Male headed households – Sri Lanka	3.9 million
Female headed households – Sri Lanka	1.2 million
Percentage of female headed households – Sri Lanka	23.0 %
Percentage of never attended school population – Sri Lanka	4.4 %

### School education

Percentage of currently attending school children (aged 5-14 years) - Sri Lanka	99.4%
Percentage of currently attending school children (aged 5-19 years) - Sri Lanka	83.5 %

### Income

Mean household income per month – Sri Lanka	Rs. 36451
Mean household income per month – Urban sector	Rs. 47783
Mean household income per month – Rural sector	Rs. 35228
Mean household income per month – Estate sector	Rs. 24162
Median household income per month – Sri Lanka	Rs. 23746
Median household income per month – Urban sector	Rs. 31000
Median household income per month – Rural sector	Rs. 23126
Median household income per month – Estate sector	Rs. 17366
Share of income to total household income – Poorest 20% - Sri Lanka	4.5 %
Share of income to total household income – Poorest 40% - Sri Lanka	13.3 %
Share of income to total household income – Richest 20% - Sri Lanka	54.1 %
Gini co-efficient of household income – Sri Lanka	0.49
Gini co-efficient of household income – Urban sector	0.48
Gini co-efficient of household income – Rural sector	0.49
Gini co-efficient of household income – Estate sector	0.43
Average household size – Sri Lanka	4.0
Average household size – Urban sector	4.3
Average household size – Rural sector	4.0
Average household size – Estate sector	4.2

Average per capita income per month – Sri Lanka	Rs. 9104
Average per capita income per month – Urban sector	Rs. 11245
Average per capita income per month – Rural sector	Rs. 8916
Average per capita income per month – Estate sector	Rs. 5782

Income receiver's mean income per month – Sri Lanka	Rs. 20427
Income receiver's mean income per month – Urban sector	Rs. 25419
Income receiver's mean income per month – Rural sector	Rs. 20121
Income receiver's mean income per month – Estate sector	Rs. 11639

Number of income receiver's per household – Sri Lanka	1.8
Number of income receiver's per household – Urban sector	1.9
Number of income receiver's per household – Rural sector	1.7
Number of income receiver's per household – Estate sector	2.1

Monetary income per month – Sri Lanka	Rs. 31209
Non monetary income per month – Sri Lanka	Rs. 5242

## **Expenditure**

Mean household expenditure per month – Sri Lanka	Rs. 31331
Mean household expenditure per month – Urban sector	Rs. 44928
Mean household expenditure per month – Rural sector	Rs. 29423
Mean household expenditure per month – Estate sector	Rs. 23988

Expenditure on food and drink per month -Sri Lanka	Rs. 13267
Expenditure on non-food items per month - Sri Lanka	Rs18064

Food ratio – Sri Lanka	42.3 %
Food ratio – Urban sector	35.4 %
Food ratio – Rural sector	43.7 %
Food ratio – Estate sector	50.9 %

Gini co-efficient of household expenditure – Sri Lanka	0.39
Gini co-efficient of household expenditure – Urban sector	0.39
Gini co-efficient of household expenditure – Rural sector	0.38
Gini co-efficient of household expenditure – Estate sector	0.31

## **Poverty**

Head count ratio – Sri Lanka	8.9 %
Head count ratio – Urban sector	5.3 %
Head count ratio – Rural sector	9.4 %
Head count ratio – Estate sector	11.4 %

# 1. Introduction

The Household Income and Expenditure Survey (HIES) is conducted by the Department of Census and Statistics (DCS) under the National Household Survey Programme (NHSP) of Sri Lanka. The DCS has completed the most recent HIES, the HIES 2009/10 and this publication exposes the final information gathered in the survey.

The field work of the survey was carried out during the period from July 2009 to June 2010 covering all the districts except Mannar, Kilinochchi and Mullaithivu districts in the Northern province.

The HIES 2009/10 is the seventh in the HIES series and the information in this report is presented at national, sector, province and district levels along with the previous survey findings where applicable to facilitate effective comparisons overtime.

## 1.1 History

The HIES was started to conduct as Labour Force and Socio Economic Survey (LFSES) in 1980/81 and it was conducted for the second time in 1985/86. The LFSES, through a single survey, provided comprehensive information on labour force, household income and expenditure and demographic characteristics of the households and household population in Sri Lanka. In 1990 the LFSES was separated into the under mentioned 2 individual surveys as the labour force information of the country was more frequently needed.

1. Labour Force Survey (LFS)
2. Household Income and Expenditure Survey

The maiden HIES was conducted in 1990/91 as a separate survey with the view of providing information on household income and consumption expenditure in order to measure the levels and to observe the changes of living conditions in the country. The HIES information is also used to estimate consumption needs of the country and to compute various other important indicators related to poverty and price indices. Generally the HIES surveys a sample of 25,000 housing units throughout the country to facilitate the information be given at district level. Data is collected at the field in twelve consecutive monthly rounds to capture seasonal variations in income, expenditure and consumption of households. The data collection of the survey is done through direct interviews using the survey questionnaire, which included the following three main sections.

1. Demographic characteristics
2. Household expenditure (on food and non-food)
3. Household income (monetary and non-monetary)

The previous survey conducted in 2006/07 was the sixth in the HIES series and was conducted during the period from July 2006 to June 2007 in all the provinces except in the Northern province in Sri Lanka. Although it was planned to conduct in 2005, it had to be postponed to 2006/07 due to the tragic 2004, December 26<sup>th</sup> Tsunami disaster that destroyed most of the housing units in the coastal areas of mostly in the Eastern and the Southern provinces.

The HIES gathers information related to demographic characteristics of the members of the surveyed households, expenditure on food and non-food items and income received by each household member from all the different sources in a compulsory manner. Starting from the HIES 2006/07, the survey questionnaire was further expanded beyond the collection of demographic, income and expenditure information. It has been introduced 7 new sections to collect almost all the other household information that helps to understand the correct living standards of the households. Those newly introduced areas covered by the HIES starting from the HIES 2006/07 are as follows.

1. School education (aged 5-19 years)
2. Health information
3. Inventory of durable goods
4. Access to infrastructure facilities
5. Household debts and borrowings
6. Housing, sanitary and disasters
7. Land and agriculture holdings

## 1.2 Limitations of the survey data

The HIES 2009/10 is limited to a sample of 22,581 households which excluded Mannar, Kilinochchi and Mullaithivu districts. Due to massive mine clearance and resettlement activities existed in most of the areas after the May 2009 completion of de-terrorizing the Northern province and the Eastern province.

Information given in this report of the HIES 2009/10 is based on the data collected in all the twelve survey months from July 2009 to June 2010. However the Vavuniya district in the Northern province and the entire Eastern province survey was limited to 10 months starting from September 2009 to June 2010 and the Jaffna district was further delayed till December 2009.

The information published in preliminary publications, which were provided, based on only the first 3 monthly rounds of the survey to fulfill urgent data needs of the country, is superseded by the information provided in this final report based on total 12 survey months.

### 1.3 Survey methodology

Sample design of the survey is two stage stratified and the Urban, Rural and the Estate sectors in each district of the country are the selection domains thus the district is the main domain used for the stratification. The sampling frame is the list of housing units prepared for the Census of Population and Housing (CPH) 2001 and the HIES 2009/10 will be the last HIES sampled from this sampling frame as the DCS is all set to conduct the CPH in 2011 based on whole newly prepared set of census blocks, which has been almost completed by now.

#### 1.3.1 Selection of Primary Sampling Units

Primary sampling units (PSUs) are the census blocks selected for the survey and the sampling frame, which is the collection of all the census blocks prepared in 2001 in Sri Lanka, is used for the selection of the PSUs at the first stage of the selection.

The PSU selection is done within all the independent-selection domains that are assigned different sample size allocations to total the targeted sample size of 2,500 PSUs. The method of selection of the PSUs at the first stage is systematic with a selection probability given to each census block proportionate to the number of housing units available in the census blocks within the selection domains (PPS).

The selected PSUs are updated to include newly built housing units and to exclude demolished or vacated housing units, which are no longer considered as housing units according to the survey definitions, to capture variation of natural growth and to make necessary adjustments for the same. The PSU updating operation in field is generally done less than one month prior to the survey and it was carried out for the 12 months starting from June 2009 to May 2010 to support the scheduled 12 survey months started from July 2009 to June 2010 for the HIES 2009/10.

#### 1.3.2 Selection of Secondary Sampling Units

Secondary Sampling Units (SSUs) or Final sampling units (FSUs) are the housing units selected at the second stage from the 2,500 PSUs selected at the first stage. From each PSU, 10 SSUs (housing units) are systematically selected giving each housing unit in the PSU an equal probability to be selected for the survey. The total sample of size 25,000 housing units is resulted at the end of the sampling process and this sample represents the whole country in different probabilities depend on the different sample sizes allocated for the selection domains.

### 1.3.3 Sample allocation

Allocation of the number of PSUs or determining the sample sizes for the districts is made proportionate to the number of housing units and the standard deviations of the mean household expenditure values reported in the respective districts in previous surveys (Neymann Allocation). Sector allocation of the district sample is made proportionate to the square root of the sizes of the respective selection domains (Urban, Rural and Estate sectors in the district). The sample of PSUs within the selection domain is equally distributed among the 12 survey months and the monthly sample too is equally dispersed among all the weeks in the month assigning a specific week for each PSU for the survey activities.

Table 1.1 Sample allocation and completion by district

District	Housing units		Households responded
	Selected	Responded	
<b>Sri Lanka</b>	<b>23,631</b>	<b>19,809</b>	<b>19,958</b>
Colombo	3000	2,381	2,404

Kegalle	833	739	741

Table 1.2: Sample allocation for sectors

Sector	Housing units		Households responded
	Selected	Responded	
<b>Sri Lanka</b>	<b>23,631</b>	<b>19,809</b>	<b>19,958</b>
Urban	6,549	5,225	5,273
Rural	15,056	12,862	12,949
Estate	2,026	1,722	1,736

## 1.4 Estimation procedure

Let  $\hat{X}_j$  be the estimate of total of any given characteristic for  $j^{\text{th}}$  district and this could be given by,

$$\begin{aligned}\hat{X}_j = & \frac{1}{m_{j(u)}} \sum_{h(u)=1}^{m_{j(u)}} \frac{1}{P_{h(u)}} \frac{N_{h(u)}}{n_{h(u)}} \sum_{i(u)=1}^{n_{h(u)}} X_{hi(u)} \\ & + \frac{1}{m_{j(e)}} \sum_{h(e)=1}^{m_{j(e)}} \frac{1}{P_{h(e)}} \frac{N_{h(e)}}{n_{h(e)}} \sum_{i(e)=1}^{n_{h(e)}} X_{hi(e)} \\ & + \frac{1}{m_{j(r)}} \sum_{h(r)=1}^{m_{j(r)}} \frac{1}{P_{h(r)}} \frac{N_{h(r)}}{n_{h(r)}} \sum_{i(r)=1}^{n_{h(r)}} X_{hi(r)}\end{aligned}$$

Where,

$m_{j(u)}$  = Number of census blocks selected from the urban sector of the  $j^{\text{th}}$  district for the survey

$P_{h(u)}$  = Selection probability of the  $h^{\text{th}}$  census block in the urban sector.

$$P_{h(u)} = \frac{S_{jh(u)}}{\sum_{h=1}^{M_{jh(u)}} S_{jh(u)}}$$

$S_{jh(u)}$  = Measure of size (number of housing units) of the  $h^{\text{th}}$  census block in the urban sector of the  $j^{\text{th}}$  district.

$M_{jh(u)}$  = Total number of census blocks in urban sector of the  $j^{\text{th}}$  district.

$N_{h(u)}$  = Total number of housing units listed in the  $h^{\text{th}}$  census block in the urban sector.

$n_{h(u)}$  = Number of housing units selected from the  $h^{\text{th}}$  census block in the urban sector.

$X_{hi(u)}$  = The observed value for the  $i^{\text{th}}$  sample household in the  $h^{\text{th}}$  census block in the urban sector.

$m_{j(r)}$ ,  $P_{h(r)}$ ,  $S_{jh(r)}$ ,  $M_{jh(r)}$ ,  $N_{h(r)}$ ,  $n_{h(r)}$ , and  $X_{hi(r)}$  are corresponding terms for the rural sector and  $m_{j(e)}$ ,  $P_{h(e)}$ ,  $S_{jh(e)}$ ,  $M_{jh(e)}$ ,  $N_{h(e)}$ ,  $n_{h(e)}$ , and  $X_{hi(e)}$  are corresponding terms for the estate sector.

The estimate for the total value of the characteristic  $X$  for the country (22 districts) could be given by,

$$\hat{X} = \sum_{j=1}^{22} \hat{X}_j$$

Note:

The estimation procedure given above is for the total sample covered in 12 monthly rounds and the estimates given in this publication is based on the sample covered in 22 districts.

## 1.5 Adjustment for unit non-response

The occurrence of unit non-response was determined by examining the final result code recorded under data control section of the survey schedule. Based on the final result codes the households were grouped into the following categories, which were used as a basis for adjusting for the unit non-response.

Category and description	Result code
1. Schedule completed	1
2. Housing unit demolished or vacant	6
3. Unable to complete schedule, refusal, temporarily away etc.	2,3,4,5,9

### Category 1 and 2

These were considered as fully accounted for as a schedule was completed to the extent required by the situation at the time of interview and therefore no adjustment was necessary.

$$\hat{X}_{jk(u)} = \frac{1}{m_{jk(u)}} \sum_{h(u)=1}^{m_{jk(u)}} \frac{1}{P_{h(u)}} \frac{N_{h(u)}}{n_{h(u)}} \sum_{i(u)=1}^{n_{h(u)}} X_{hi(u)}$$

### Category 3

This is incomplete therefore a non-response adjustment was made for this category. The assumption made here for the adjustment of non-response was the proportion of households in category 3 is the same as the corresponding proportion for sample households in category 1. This assumption is applied on a block-by-block basis separately for urban, rural and estate sectors.

The block weight before adjusting for unit non-response was

$$W'_h = \frac{1}{m_j} \sum_{h=1}^{m_j} \frac{1}{P_h} \frac{N_h}{n_h}$$

Where

$N_h$  = Total number of housing units listed in block h.

$n_h$  = Number of housing units selected in block h.

The revised weight should take the form

$$W_h = W'_h \cdot \left( \frac{n^1_h - n_{h2}}{n_{h1}} \right)$$

Where

$n_{h1}$  = Number of sample households in category 1.

$n_{h2}$  = Number of sample households in category 2.

$n^1_h$  = Total number of households in all the 3 categories (category 1, 2 and 3)

## 1.6 Definitions and Concepts

Readers should aware about the frequently used definitions of the survey terms prior to interpret or compare the data. The definitions of the terms frequently used in this report are given below.

### Household

A household may be a one-person household or a multi person household. A one-person household is a unit where a person lives by himself and makes separate provision for his food, either cooking himself or purchasing. A multi person household is a group of two or more persons who lives together and has a common arrangement for cooking and partaking food. Boarders and servants who share the meals and housing facilities with other members of the household are also considered as members of the household.

### Head of the household

Head of a household is a person who usually resides in the household and is acknowledged by the other members of the household as the head of the household.

### Residential sector

The residential sector can be either Urban sector, Rural sector or Estate sector.

### Urban Sector

Area governed by either Municipal Council (MC) or Urban Council (UC) is considered as Urban Sector.

### Estate Sector

Plantation areas, which are more than 20 acres of extent and having not less than 10 residential laborers, are considered as estate sector.

### Rural Sector

Residential areas, which do not belong to the Urban sector or Estate sector described above, are considered as Rural sector.

### Marital Status

The marital status recorded was the current status at the time of the survey. A person whose marriage was registered is classified as married (registered). If the marriage has not been registered according to the law but the person claimed to be married according to the custom or repute then it is also classified as married (customary).

A person is regarded as divorced only if a divorce has been obtained in a court of law. A person who has obtained a judicial or legal separation in a court of law is classified as separated (legally). On the other hand if a person had been voluntarily separated without obtaining a court order then such persons fall into the same category classified as separated (not legally)

### Educational attainment

This refers to the highest academic qualification obtained and the professional and technical qualifications are excluded. In the case of person with no such qualifications the highest grade or class passed in school is considered as the level of education or educational attainment.

### Share of income

$$\text{Share of income} = \frac{\text{Total income of the households or persons belong to the group}}{\text{Total income of all households or persons in all groups}}$$

### Household size

Number of persons usually living in the household including boarders and servants etc. is defined as the household size.

### Household income deciles

Income deciles are income groups whose boundaries are defined as to get 10 percent of the total number of households fallen into each group.

### Household expenditure deciles

Expenditure deciles are defined similarly as income deciles, but expenditure values are used instead of income values.

### Gini Co-efficient

Gini Co-efficient, which is the most popular indicator used to measure the depth of inequality of a distribution is defined as the ratio of the area between the diagonal and the Lorenz curve to the triangular region underneath the diagonal.

### Income receiver

A person who is 10 or more years old and his or her calculated total monthly income received from any source is more than or equal to Rs.150 then he or she is defined as an income receiver in this survey.

### Food Ratio

$$\text{Food ratio (\%)} = \frac{\text{Household expenditure on food and drink}}{\text{Total household expenditure (food and drink and non food)}} \times 100$$

### Dependency ratio

In this survey, dependency ratio is defined as follows

$$\text{Dependency ratio} = \frac{\text{Persons aged less than 15 years and above 60 years}}{\text{Persons aged 15 – 59 years}}$$

## 1.7 Reliability of the estimates

The actual sample which is based for this publication is limited to 23,637 households surveyed in total 12 months and the estimations given in HIES are mostly limited to district level to preserve the reliability of them. However, after carefully considering the sizes of the standard errors, the HIES can produce some of the Divisional secretariat level estimations too.

Reliability statistics calculated for the district level estimations of mean Household expenditure (Rs. / monthly) are given below to build confidence among advanced data users and to support future sample design activities of similar type of surveys.

Table 1.3: Estimation, Standard error, coefficient of variation and 95% confidence intervals of mean Household expenditure (Rs. /month) by district - 2009/10

District	Estimate	Standard error	Coefficient of variation (%)	95% confidence interval

## 2. Income

The Household Income and Expenditure Survey (HIES) defines the household income as the total income received by all the members of the household, either in cash (monetary income) or in kind (non-monetary income) from all the sources.

The household income sources are investigated and reported under the following 7 main categories in the survey questionnaire.

1. Wages and salaries
2. Agricultural activities (seasonal crops)
3. Agricultural activities (non-seasonal crops)
4. Non agricultural activities
5. Other regular cash receipts such as pensions, dividends, rents, interest amounts received from various types of savings, current remittances and local and foreign transfers
6. Irregular gains or windfall income such as compensations, lottery wins etc. and sales of goods and savings.
7. Income in-kind

Obtaining income information from individuals and households is a difficult task as many people reluctant to disclose many of them and often under report. Therefore to ease the field work, which is the most challenging activity of the survey, and to gather more accurate and reliable data, income information of the household members were collected individually in all the 6 income sections tactically arranged in the HIES questionnaire.

The income in kind is mostly the estimated values of the household consumed items such as home grown fruits and vegetables, firewood collected etc. and estimated rental values of owner occupied housing units gathered in the consumption expenditure section of the survey questionnaire.

An extra column has been provided at household level in the expenditure section to record estimated values of household consumed goods and services received fully or partially free of charge or purchased on price concessions provided by employers etc. This information of income in-kind along with the monetary income collected in the 6 income sections are aggregated and summarized in order to estimate, average monthly household income (mean income), median income, per capita income, income receivers' income and various other indexes such as, Gini coefficients, shares of income etc. at many different geographic and social domain levels.

### 2.1 Household Income

The mean (average) and median income is the prime statistic used to compare income values reported in different domains over time and within. Mean household income is the value obtained by dividing the total aggregated household income by total number of households in a domain or in an area. Median income is the income value at which the income distribution is divided into two equal size groups. This middle point or the median is important as always the income of one half of the population falls either above or below that value and the median income is a better indicator than the mean (average) income as the median is not dramatically affected by extreme or unusually high or low values. However both the mean and median are based on all the households in the population.

The survey results revealed that the mean monthly household income in Sri Lanka was Rs. 36,451 in 2009/10. Considering the average monthly household income among three sectors, the value of rural sector indicates closer mean value (Rs. 35,228) to the national value. That value of the households, those who are in urban sector is about Rs. 11,000/- greater than the national figure. But the relevant figure for estate sector is remarkably less than all island figure amounting about Rs 12,000/-.

When the provinces are compared, the Western province which reported the highest household income level is nearly 2 times higher than the values reported by the Northern province which reported the lowest values for both the median and the mean income.

Considering the district figures, Colombo district has indicated the highest monthly income for both mean and median measurements. (Rs. 51,070 for mean and Rs.34,186 for median respectively) The median value indicates that out of the total household in Colombo district, half of them receive more than Rs. 34,186/- per month and the other half get less than that amount during the period under review. Accordingly for all other districts, same interpretation can be made by reading the particular median values.

In every district the mean or the average income falls beyond the median income, resulting positively skewed distributions which is a common phenomenon in almost all the income distributions.

Figure 2.1: Mean and median of monthly household income by sector - 2009/10

In addition to the median value, decile groups are also ease the understanding about an income distribution, particularly the inequality of the distribution. The boundary values of the decile groups break a distribution into 10 equal size groups and the first decile holds the population 10 percent which the lowest values of the distribution are attributed to. So to obtain the

range values of the household income deciles, all the households are arranged in ascending order according to the income and divided into 10 equal sized groups. Table 2.2 and 2.3 shows the mean and median household income values reported within the national and sector level household income deciles respectively.

Table 2.2 : Mean and median household income by household income decile - 2009/10

10	More than 64443	10.0	17.7	9.1	2.7	39.5	50.3	37.7	22.0

Table 2.3 implies the distributions of shares of income out of total household income among deciles for each sector along with the national level distribution. According to the table, the 10<sup>th</sup> decile groups of all the sectors and all island held very high shares of household income and the corresponding figures for urban, rural and estate sectors are 38.2 percent, 39.3 percent and 36.0 percent respectively.

Table 2.4 shows the households shares and income shares by the national household income deciles to total number of households and total income respectively at national and sector levels. According to the Table 2.4, 17.7 percent of the urban sector households received 50.3 percent of the total urban

sector household income. All the households in the tenth national decile group received over Rs. 64,443 monthly per household. On the other hand when the Table 2.4 is carefully examined, it also shows that 58.5 percent of the estate sector households are among the poorest 40 percent households of the country in 2009/10 and they have contributed to 29.4 percent of the total household income in the estate sector.

## 2.2 Inequality of income

The simplest but a popular way to understand the income inequalities is dividing the population into income quintiles and analyzing the proportions of income calculated at each quintile from poorest to richest. A national household income quintile represents 20% or one fifth of the total households in Sri Lanka. The highest or the fifth quintile holds the richest 20% households whereas the first is for the poorest 20%. Middle income group consist of the households, which belong to second, third and fourth quintiles. The table 2.5 shows the percentage share of income distributed for each income group in Sri Lanka.

It is shown in Figure 2.2 that the richest 20 percent (9th and 10th deciles groups) was receiving nearly 54 percent of the total household income of Sri Lanka while the poorest 20 percent (1st and 2nd deciles groups) was receiving only 4.5 percent in 2009/10. Considering the poorest 40 percent in table 2.5, the corresponding figure was 13.3 percent.

Figure 2.2: Share of household income by household income quintiles - 2009/10

Table 2.5: Percentage share of income received by poorest to richest households by sector, province and district - 2009/10

### 2.2.1. Gini coefficient

Gini coefficient (Gini) is one of the widely used indicators to measure the depth of inequality of an income distribution. The Gini is based on the Lorenz curve which plots cumulative proportions of the total income of the population in y axis and cumulatively share of the population from the lowest to highest income in x axis. The Gini can take values between zero and one and the line drawn at 45 degrees or the diagonal of the Lorenz curve represents a distribution with zero Gini value which indicates perfectly equal or zero level of inequity of the distribution. The Lorenz curve shown in Figure 2.3 is based on the monthly household income values reported in HIES 2009/10.

The survey results revealed that the Gini of the mean household income in Sri Lanka is 0.49. The relevant figures reported for urban, rural and estate sectors are 0.48, 0.49 and 0.43 respectively. This means income disparity between households in estate sector is relatively lower than those are in other two sectors.

Figure 2.3: Lorenz curve for household income distribution - 2009/10

Table 2.6 presents the Gini coefficients of household income, per capita income and income receiver's income by sectors and by provinces. There were no significant differences noticed among the income distributions of the sectors whereas when the provinces are considered highly varied Gini is shown. The highest Gini was reported from the Central province and the Sabaragamuwa province (0.51 and 0.50) and the Eastern province shows the lowest income inequality with 0.33 of Gini.

Table 2.6: Gini coefficients for mean income, per capita income and income receiver's income by sector, province and district - 2009/10

\* Reliable estimates can not be provided

## 2.3 Per capita income

Per capita income is frequently used and a better indicator to understand and compare the country's standard of living over time as it does not depend as much the household income and the expenditure does on the household size. However the per-capita income too varies, in reverse to the household income with the household size and the lower the household size higher the per-capita income. Per capita income in a domain is calculated by dividing the estimated total household income by the estimated number of household population in the domain and is also used to measure and compare the wealth status of domains.

According to the Table 2.7 which shows the mean and median monthly per-capita income of the country at sector, province and district levels in 2009/10, the mean monthly per capita income at national level was Rs. 9,104 and that of median figure was Rs. 5,803 during the period under review. Figure 2.4 depicts that a significantly greater disparity of monthly per capita mean income among sectors than those of median income.

Figure 2.4: Mean and median monthly per capita income by sector - 2009/10

### 2.3.1 Household size

Number of persons, including boarders and servants usually live in a household is the definition given for the household size. According to the survey the mean household size in Sri Lanka has come down to 4.0 persons per household in 2009/10. Table 2.8 shows that the household size gradually increases from about 3 persons to about 4.5 persons with the increase of the household income across the first to tenth decile group in Sri Lanka and in all the 3 sectors as well.

<b>10</b>	More than 16068	23020	36376	39.9	3.3

Table 2.8 shows the distribution of median and mean per capita income, share of income and household size by income decile calculated using the mean per capita income. According to the table median per capita income in Sri Lanka is reported as Rs. 5803 which is remarkably lower than the mean value.

When considering the share of income, approximately 54.3 percent of the total income has been distributed among richest 20 percent of the population in the country. Over and above, only 35 percent of the total income is left to be shared by lower income receiving 70 percent (first 7 deciles).

Figure 2.5: Share of household income by per capita income quintiles - 2009/10

## 2.4 Income receiver's income

In order to obtain the Income receiver's income, the HIES records the household income, received from all the sources, by source and person. The Income receiver's income is the sum of the income values recorded in each income section arranged according to the income source in the survey questionnaire.

If a person is less than 10 years old or his aggregated total monthly income is less than Rs. 200, then he was not defined as an income receiver by the HIES 2009/10 and such income values were added to the income of the heads of the respective households. It is obvious that the household income is so built on the income of the income receivers in the household and thus the total household income of the country is equal to the sum of the income values recorded by the total income receivers at all of the source sections of the survey questionnaire.

Table 2.9: Average number of income receivers and household size by sector, province and district - 2009/10

The separate analysis of the income receiver's income of the survey reports that the average monthly income receiver's income and median income for the country in 2009/10 was Rs. 20427 and Rs. 12500 respectively. Table 2.10 says that both the mean and the median income of the monthly income receiver's income reported by the urban sector are more than two times higher than those reported by the estate sector.

Figure 2.6 illustrates the distribution of mean and median monthly per capita income for each district. According to the figure the gap between mean and median per capita income is considerably high in, Ratnapura, Gampaha Kurunegala, Colombo, Anuradhapura and Puttalam districts. That means relatively greater number of people in those districts earns large amount per month than those in other districts.

Figure 2.6: Income receiver's mean and median monthly income by district - 2009/10

### 3. Expenditure

Household expenditure data were collected in three major sections of the survey questionnaire.

- I. Expenditure on food.
- II. Expenditure on non food.
- III. Expenditure incurred by boarders and domestic servants.

Under food expenditure, all the food items consumed by the household during the reference period (one week) were collected. For non food expenditure, all non food items and services purchased by the household during the given reference period were collected. Personal expenditure of boarders and domestic servants who live in the household is reported according to the related expenditure group in a separate section of the schedule.

To obtain more accurate date, the first two sections are divided in to 35 sub groups. Of that total 19 sub groups are included under the section of expenditure on food such as cereals , prepared food, vegetables , fish , meat etc. and the rest of 16 sub groups are included under the section of non food expenditure. i.e. housing, fuel and light, health, durable goods etc.

To gather more reliable information on expenditure, food expenditure was collected for 7 consecutive days from each household selected in the sample. But non food expenditure was collected for different reference periods varying from one month to twelve months.

#### 3.1 Household expenditure

According to the Table 3.1 the average household expenditure is Rs.31,331 per month for Sri Lanka in 2009/10. When residential sectors (Urban, Rural and Estate) are compared, households in urban sector have spent Rs. 44,928 per month and households in rural sector have spent Rs. 29,423 per month. Households in Estate sector have spent Rs.23, 988 per month which is the lowest value among sectors.

Table 3.1 also shows the average monthly household expenditure on food and drink, and non food items by province and by district. It is reported that households in Western province have spent Rs. 42,399 per month and households in Uva province have spent Rs.23,547 per month. When districts are compared the highest mean household expenditure is reported from Colombo district (Rs.47,291 per month) while the lowest mean household expenditure is reported from Moneragala district (Rs.21,131 per month)

Gini coefficient of household expenditure in Sri Lanka is reported as 0.39 and the Gini coefficient for per-capita income distribution reported as 0.38 in 2009/10 survey period.

When the sectors are considered, the lowest value for the Gini coefficient of household expenditure is reported in estate sector (0.31). This nature of very low inequity within the sectors can be seen for the per capita expenditure as well. This reflects the homogeneous consumption pattern among the households and people in estate sector than the other two sectors.

Table 3.3 prove that the average monthly expenditure of a household in the expenditure group of tenth decile (Rs. 92,057) is more than ten times greater than that of the first decile group received (Rs. 8,488). As well as when consider the mean household income by expenditure decile group it is evident that the tenth decile group has received the average household income 9.1 times greater than that of first decile received. Table 2.4 indicate the changing pattern of average monthly mean household expenditure, mean

household food and non food expenditure and mean household income by household income decile.

Table 3.5 shows that the shares of expenditure to total expenditure by expenditure deciles calculated for Sri Lanka, urban, rural and estate. The shares of expenditure to total expenditure among deciles calculated for Sri Lanka, urban and rural sectors show a similar pattern but estate sector has a slightly different pattern. In Sri Lanka 44 percent of total expenditure shared by 70 percent of households which are in first 7 deciles groups, however in the estate

sector, the 48 percent of total expenditure reported from households in first seven deciles (70 percent of households in estate sector).

Table 3.6 indicate the monthly household expenditure by expenditure decile and by Sector.

## 3.2. Food ratio

The ratio of expenditure on food and drink to total expenditure is called the food ratio and it is generally presented as a percentage.

$$\text{Food ratio (\%)} = \frac{\text{Household expenditure on food and drink}}{\text{Total household expenditure (food and drink and non food)}} \times 100$$

The expenditure on liquor and tobacco etc. are not considered as a part of food and drink expenditure, whereas it is a part of the total expenditure in the above food ratio calculation.

Average monthly household expenditure for Sri Lanka is Rs.31, 331. Of this value, Rs. 13,267 is spent on food and drink, which is about 42 percent of the total expenditure and it, is defined as the food ratio. Table 3.1 shows the food ratio by sector, by province, and by district. When comparing the food ratio by districts, the lowest food ratio reported from Colombo district (34 percent) while the highest food ratio is reported from Jaffna district (65 percent) in 2009/10. It is clear that those who live in Colombo district spend more on housing, education, transport, electricity, and health etc, compared with those who live in Jaffna district. This does not imply that the households in Colombo district spend fewer amounts on food than the household in Jaffna district. The absolute expenditure values for food and drink in Colombo and Jaffna district are Rs. 16,121 and Rs. 14,787 respectively.

### 3.2.1 Consumption of food

Cereals (rice, wheat flour, etc.) and prepared food are the two major groups which are consumed in large quantities rather than other major food groups in Sri Lanka. The household consumption and expenditure for major food groups by sector and province and by district are shown in Table 3.7 A and Table 3.7 B.

According to the Table 3.7A when comparing the cereals consumption pattern among the sectors, the highest consumption of cereals is reported from Estate sector (Rs. 3923) and the lowest consumption of cereals is reported from urban sector (Rs. 2381). But it is very clear that the households in urban sector have spent more (Rs.2416) for prepared foods than the households in Rural and Estate sector. The corresponding figures for rural and estate sectors are Rs.1278 and Rs.692 respectively.

Table 3.8A and 3.8B shows the percentage distribution of average monthly household expenditure on major food groups given in Tale 3.7A and 3.7B respectively. The households in the Nuwara Eliya district have spent 29 percent for cereal from total food expenditure. On the other hand Colombo district shows the highest percentage of expenditure on prepared foods (15.5 percent of total food expenditure)

### 3.2.2 Selected food items

Rice, wheat flour and bread etc. are favorite food items consumed in Sri Lanka. Table 3.9 shows the expenditure values of some selected food items by national household expenditure deciles. Table 3.10 gives the consumption quantities for those selected food items.

Table 3.9 shows food items like Samba rice, bread, chicken, Kelavalla, eggs, milk powder, banana, etc. The households in the 10<sup>th</sup> decile group have significantly spent more money for food items than households in the first decile group.

Table 3.10 shows the consumption quantities for selected food items like chicken, Kelavalla, and milk powder etc. The consumption quantities of more items have increased from first decile to 10<sup>th</sup> decile.

Figure 3.3: Average monthly household consumption of rice by sector - 2009/10

### 3.2.3 Consumption of rice

When comparing the rice consumption pattern among the sectors, households in rural sector show the highest consumption of Kekulu rice and household in urban sector consumed the lowest quantity of Kekulu rice.

Table 3:11A shows that the highest consumption of Nadu rice was reported from estate sector (22.7kg) and the lowest consumption was reported from urban sector (7.8kg).Table 3.11B provide the average monthly household expenditure on selected food items by sector by province and by district

Figure 3.4: Average monthly household consumption of rice varieties by national household expenditure decile - 2009/0

### 3.2.4 Consumption of wheat flour

The average monthly consumption of wheat flour is reported as 2.7 kg per month per household in Sri Lanka. (Table 3.11A) The highest consumption of wheat flour per household per month is reported from Estate sector, Jaffna district and Vavuniya districts when sectors and districts are compared.

### 3.2.5 Consumption of bread

Table 3.11A shows that the average monthly household consumption quantity of bread is 5.1 kg per month in Sri Lanka. When sectors are compared it can

be noticed that the households in urban sector consumed large quantity of bread which is reported as 8.1 kg per month.

### 3.2.6 Consumption of coconuts

Average monthly household consumption of coconuts is 29.5 nuts per month in Sri Lanka. The households in rural sector consume more coconuts than those in other two sectors. It is reported as 31 nuts per month.

Figure 3.5: Average monthly household consumption quantities of wheat flour and bread by district - 2009/10

### 3.3 Non food expenditure

Housing, fuel and light, clothing, health, education, transport, communication etc are the major non food groups in this survey. Table 3.12 and Table 3.13 shows the average monthly household expenditure on major non food expenditure group and their percentage values to total non food expenditure by sector province and district respectively.

According to the Table 3.12 average monthly non food expenditure per household is Rs 18,064 (included the expenditure on liquor, tobacco etc.) the lowest total non food expenditure values (Rs.7938) is reported from Jaffna district and Northern province when districts and provinces are compared. The highest non food expenditure values are reported from urban sector, Western province and Colombo district when compared sectors, provinces and districts separately.

Table 3.14 shows the average monthly household expenditure on major non food expenditure group by national household expenditure decile. Households in the 1<sup>st</sup> decile group have spent Rs. 2,839 per month for non food items and the corresponding figure for the 10<sup>th</sup> decile group is Rs. 70,337. It is very clear a high variation can be observed between the lowest decile group and the highest decile group for expenditure on non food items.

Table 3.15 gives the percentage expenditure values of the Table 3.14 when comparing household expenditure on non food items, it shows that the household in the 1<sup>st</sup> decile group have spent the highest percentage from their expenditure (32%) for housing rent and the household in the 10<sup>th</sup> decile group have spent for their other miscellaneous expenses per month (21.9%).

Figure 3.6: Total expenditure on non-food by district - 2009/10

## 4. Poverty

### 4.1 Head count index and poverty status

Head count Index is the percentage of population below the poverty line and it is widely used to measure poverty in Sri Lanka.

$$\text{Head Count Index} = \frac{\text{Number of poor People in the population}}{\text{Total population}} \times 100$$

Table 4.1 shows that headcount index is 8.9 percent (percentage of population below the poverty line) at national level.

Estate sector reports the highest head count index (11.4 percent) than that of the other two sectors.

When districts are compared the highest head count index (20.3 percent) is reported Batticaloa district and the lowest (2.3 percent) is reported from Vavuniya district.

Table 4.1 also shows the percentage of poor households at sector, province and district level (Under the poverty definition, according to the Table 4.1, 7.0 percent of households is identified as poor households in Sri Lanka in 2009/10 survey period). The highest percentage of poor households (17.0 percent) is reported from Batticaloa district while the lowest percentage is reported from Vavuniya district as 2.0 percent.

Table 4.1: Poverty head count index and poverty status by sector, province and district - 2009/10

Sector Province and district	Head Count Index (%)	Poor households (%)
<b>Sri Lanka</b>	<b>8.9</b>	<b>7.0</b>
Urban	5.3	3.8
Rural	9.4	7.5
Estate	11.4	8.9

Moneragala	14.5	13.9
Ratnapura	10.4	8.5
Kegalle	10.8	9.0

## 4.2 Poverty Gap Index

Poverty gap index is a better measure to study the depth of poverty and the mean proportionate poverty gap in the population (non poor population poverty gap is zero)

The following formula is used to complete the poverty gap index.

$$PGI = \frac{1}{N} \sum_{i=1}^N \left( \frac{Z - X_i}{Z} \right)$$

Where,

N = Total No of persons

Z = poverty line

X<sub>i</sub> = Expenditure of the poor persons

(Z - W<sub>k</sub>) = 0; for non poor persons

For Table 4.2 shows poverty gap index all island is 1.7 percent in year 2009/10 survey period. This figure is a better measure of poverty. Among the sectors the highest index value (2.1 percent) is reported from Estate sector. Among the districts the highest index value (5.1 percent) is reported from Batticaloa district and lowest (0.3 percent) is reported from Vavuniya district. Squared poverty gap index is also shown in the Table 4.2.

Table 4: Poverty index by sector, province and district.

Sector /Province /District	Poverty gap index (%)	Squared poverty gap index (%)
<b>Sri Lanka</b>	<b>1.7</b>	<b>0.5</b>
<b>Sector</b>		
Urban	1.2	0.4
Rural	1.8	0.5
Estate	2.1	0.6
<b>Province</b>

Moneragala	2.8	0.8
Ratnapura	2.4	0.9
Kegalle	1.7	0.5

### 4.3: Energy Consumption

Table 4.3 shows the average per capita energy consumption for poor households and all households.

The average per capita energy consumption for all households is 2094 kilo calories per person per day in 2009/10 survey period. The corresponding figure for the poor households is 1472 kilo calories per person per day.

According to the survey results, energy consumption per person per day in urban sector household shows the lowest value (1139 kilo calories) than that of the other sectors, when poor households are compared

Among the districts, poor households in Colombo district reported the lowest average per capita energy consumption. (1054 kilo calories) and the poor households in Batticaloa district reported the highest average per capita energy consumption. (1408 kilo calories) The highest average per capita energy consumption reported in Vavuniya district (2340 kilo calories).

Table 4.3: Average energy consumption, per person per day for poor households and all households by sector province and district - 2009/10

## Codes for Section 1

### Col. 3 - Relationship to head of the household

Head of the household.....	1
Wife/ Husband .....	2
Son/ Daughter .....	3
Parents .....	4
Other Relative .....	5
Domestic Servants .....	6
Boarder .....	7
Other .....	9

### Col. 4 - Sex

Male .....	1
Female .....	2

### Col. 7 - Ethnicity

Sinhala.....	1
Sri Lanka Tamil.....	2
Indian Tamil.....	3
Sri Lanka Moors .....	4
Malay .....	5
Burgher .....	6
Other .....	9

### Col. 8 - Religion

Buddhist .....	1
Hindu .....	2
Islam .....	3
Roman Catholic/ Other Christian .....	4
Other .....	9

### Col. 9 -Attendance at School or Other Educational Institution

Pre school .....	1
School .....	2
University .....	3
Other educational institution .....	4
Vocational/ Technical institution .....	5
Pending results G.C.E. (O.L/A.L) .....	6
Does not attend .....	7

### Col. 10 -Level of Education

Studing in Grade 1.....	00
Passed Grade 1.....	01
Passed Grade 2.....	02
Passed Grade 3.....	03
Passed Grade 4.....	04
Passed Grade 5.....	05
Passed Grade 6.....	06
Passed Grade 7 .....	07
Passed Grade 8.....	08
Passed Grade 9.....	09
Passed Grade 10.....	10
Passed G.C.E. (O/L) or equivalent .....	11
Passed Grade 12.....	12
Passed G.C.E.(A/L) .or equivalent .....	13
Passed GAQ/GSQ .....	14
Passed Degree .....	15
Passed Post Graduate Degree / Diploma....	16
Special Education unit .....	17
No Schooling .....	19

### Col. 11 - Marital Status

Never Married .....	1
Married .....	2
Widowed .....	3
Divorced .....	4
Separated .....	5

### Col. 12 -Current Activity

Employed.....	1
Unemployed.....	2
Student .....	3
Household work.....	4
Unable / Too old to work.....	5
Other .....	9

### Col. 15 - Employment status

Government employee.....	1
Semi government employee .....	2
Private sector employee .....	3
Employer .....	4
Own account worker .....	5
Unpaid family worker.....	6
