Sri Lanka**

ISBN 978-955-702-054-9

Preface

The Department of Census and Statistics (DCS) conducts the Household Income and Expenditure Survey (HIES) under the National Household Sample Survey Program. The HIES is an yearlong sample survey which is conducted in 12 consecutive monthly rounds and an island wide representative sample of equal size is enumerated in each monthly round to capture seasonal and regional variations of income, expenditure and consumption patterns. The HIES series which started in 1980 was conducted once in every five years until 2006/07. Thereafter, as rapidly changing economic conditions demanded far more frequent monitoring of income and expenditure patterns in the country, the DCS with the help of the rapid developments in the ICT, decided to conduct the HIES once in every three years in Sri Lanka. The HIES 2016 is the ninth in the HIES series. The data of this survey are the primary source of data for various socio economic indicators of living pattern of people in different segment of population at national, sector and district levels. This information are used for planning, policy formulation, decision making, research and exercise by government and non-government organizations, academics, researchers and scholars.

The permanent field staff that has been appointed to each Divisional Secretariat (DS) divisions in Sri Lanka carried out the data collections of the survey in twelve monthly rounds starting from January to December in 2016 and covered all the districts successfully. This report is the final report of the HIES 2016, which is based on the twelve monthly rounds of the survey data and publishes much needed socio economic development indicator information of households and household population in Sri Lanka at national, sector and district levels. .

Dr. A. J. Satharasinghe
Director General
Department of Census and Statistics

Acknowledgement

This “Household Income and Expenditure Survey- 2016, Final Report ” with provincial and district level data is based on the total annual sample of 25,640 housing units, covering all districts of the country.

Overall coordination of the survey was done by Mr. D.G.S.G. Munasinghe, Additional Director General (statistics). Planning and execution of the survey was done by staff of the Sample Survey Division under the direction of Mr. M.D. Sunil Senanayake, Deputy Director Sample Survey Division.

The survey activities were organized and supervised by Mrs. W.A.C.Wijebandara, Mr. K.S.R.L.Senadeera, Mrs.M.D.D.D.Deepawansa, Mrs. C.Jayawickrama, Mr. A.K.D.C.N.S.Karunaratna, Mr. K.Weerasiri, Mrs. U.S.Dilrukshi, Mr. M.L.K.P.Kumara, Mrs. M.W.L.C.M.Chandrarathne, Mrs. P.D.Nanayakkara, Ms. R.P.M.Subashini Statisticians & Senior Statistician, of the sample survey division.

Sample selection and related work was done by Mrs. W.A.S.M.P. Gunasekara Statistical Officer assisted by Mrs. W.M.S.Nilushini, Statistical Assistant . Field data collection activities of the survey were done by Statistical Officers and Statistical Assistants attached to divisional secretariat divisions and district secretariats.

The Information & Communication Technology Division, under the direction of Mrs. I.A.M. Fernando, Additional Director General (ICT) and under the supervision of Mr. P.M.R.Fernando, Deputy Director (ICT) and Mr. W.H.P.N. Weerasiri Deputy Director (ICT), were responsible for the preparation of data entry programme and survey data entry. Data entry was decentralized and coding & data entries were done by responsible officers at district secretariats in all the districts. Data cleaning programme and its related computer software were prepared by Mr. K.M.R. Wickramasinghe, Deputy Director (ICT).

The computer data cleaning was done by the Information and Communication Technology Assistants, Data Entry Officers/Coding clerks of the Sample Survey Division and data verification was done by the Statistical Officers, Statistical Assistants and Development Officers of the Sample Survey Division, under the supervision of Statisticians and Senior Statisticians of the sample survey division and they are acknowledged for their valuable contribution during the whole survey process.

The computer data processing, final tabulations and this publication were organized and prepared by Mrs.M.D.D.D.Deepawansa and, Ms. R.P.M.Subashini, Statisticians of the Sample Surveys Division, assisted by Mrs. K.M.S. Wimalaratna, Mr.A.M.H.K. Kulathunga Statistical officers and Mrs. C. S. Liyanage, Statistical Assistant with the direction of Mr. M.D. Sunil Senanayake Deputy Director and with the guidance of Mrs. K.M.D.S.D. Karunaratne, Director (Statistics) Sample Survey Division

District staff of the Department who worked on the survey deserves a special word of thanks, The Deputy Directors/ Senior Statisticians/ Statisticians supervised the survey and field Statistical Officers who worked hard at the data collection stage, to make this survey a success. Printing of the report was done by the staff of the Printing Division, under the supervision of Mr. M.J.M Fernando, Statistician.

Finally, I wish to express my appreciation to all the respondents of the survey for their valuable contribution.

Officers engaged in the survey activities

Highlights

Demographic characteristics

Household population – Sri Lanka	20.7 million
Male population – Sri Lanka	9.7 million
Female population – Sri Lanka	11.0 million
Urban population – Sri Lanka	3.6 million
Rural population – Sri Lanka	16.1 million
Estate population – Sri Lanka	0.9 million
Number of households – Sri Lanka	5.4 million
Male headed households – Sri Lanka	4.0 million
Female headed households – Sri Lanka	1.4 million
Percentage of female headed households – Sri Lanka	25.8 %

School education

Percentage of never attended school population (aged 5-20 years) – Sri Lanka	3.4 %
Percentage of currently attending school children (aged 5-14 years) - Sri Lanka	95.0%
Percentage of currently attending school children (aged 5-20 years) -Sri Lanka	86.4 %

Income

Mean household income per month – Sri Lanka	Rs. 62,237
Mean household income per month – Urban sector	Rs. 88,692
Mean household income per month – Rural sector	Rs. 58,137
Mean household income per month – Estate sector	Rs. 34,804
Median household income per month – Sri Lanka	Rs. 43,511
Median household income per month – Urban sector	Rs. 57,833
Median household income per month – Rural sector	Rs. 42,133
Median household income per month – Estate sector	Rs. 29,134
Share of income to total household income – Poorest 20% - Sri Lanka	4.8 %
Share of income to total household income – Poorest 40% - Sri Lanka	14.4 %
Share of income to total household income – Richest 20% - Sri Lanka	50.8 %
Gini co-efficient of household income – Sri Lanka	0.45
Gini co-efficient of household income – Urban sector	0.48
Gini co-efficient of household income – Rural sector	0.44
Gini co-efficient of household income – Estate sector	0.36
Average household size – Sri Lanka	3.8
Average household size – Urban sector	4.0
Average household size – Rural sector	3.8
Average household size – Estate sector	4.1
Mean per capita income per month – Sri Lanka	Rs.16,377

Mean per capita income per month – Urban sector	Rs. 22,297
Mean per capita income per month – Rural sector	Rs. 15,508
Mean per capita income per month – Estate sector	Rs. 8,566
Income receivers' mean income per month – Sri Lanka	Rs. 33,894
Income receivers' mean income per month – Urban sector	Rs. 46,383
Income receivers' mean income per month – Rural sector	Rs. 32,134
Income receivers' mean income per month – Estate sector	Rs. 16,940
Number of income receivers per household – Sri Lanka	1.8
Number of income receivers per household – Urban sector	1.9
Number of income receivers per household – Rural sector	1.8
Number of income receivers per household – Estate sector	2.0
Mean household monetary income per month – Sri Lanka	Rs.52,979
Mean household non-monetary income per month – Sri Lanka	Rs.9,257

Expenditure

Mean household expenditure per month – Sri Lanka	Rs. 54,999
Mean household expenditure per month – Urban sector	Rs. 77,337
Mean household expenditure per month – Rural sector	Rs. 51,377
Mean household expenditure per month – Estate sector	Rs. 34,851
Median household expenditure per month – Sri Lanka	Rs. 40,186
Median household expenditure per month – Urban sector	Rs. 54,350
Median household expenditure per month – Rural sector	Rs. 38,377
Median household expenditure per month – Estate sector	Rs. 30,884
Expenditure on food and drink per month - Sri Lanka	Rs. 19,114
Expenditure on non-food items per month - Sri Lanka	Rs. 35,885
Food ratio – Sri Lanka	34.8 %
Food ratio – Urban sector	31.2 %
Food ratio – Rural sector	35.4 %
Food ratio – Estate sector	48.5 %
Gini co-efficient of household expenditure – Sri Lanka	0.41
Gini co-efficient of household expenditure – Urban sector	0.42
Gini co-efficient of household expenditure – Rural sector	0.40
Gini co-efficient of household expenditure – Estate sector	0.30
Mean per capita expenditure per month – Sri Lanka	Rs. 14,473
Mean per capita expenditure per month – Urban sector	Rs. 19,442
Mean per capita expenditure per month – Rural sector	Rs. 13,705
Mean per capita expenditure per month – Estate sector	Rs. 8,577

Poverty

Headcount index – Sri Lanka	4.1 %
Headcount index – Urban sector	1.9 %
Headcount index – Rural sector	4.3 %
Headcount index – Estate sector	8.8 %

Executive Summary

The Department of Census and Statistics (DCS) conducts the Household Income and Expenditure Survey (HIES) since 1990/91 and continued once in every five years until 2006/07. Thereafter once in every three years starting from 2009/10 due to rapidly changing economic conditions demanded far more frequent monitoring of the household income and expenditure patterns in the country. The latest survey was in 2016 covered all 25 districts in the country. HIES provides the most important socio economic indicators for development and evaluation of the socio economic development policies and plans and finalization of SDG development goals. This report provides the summary statistics of Household Income and Expenditure Survey in 2016. The key findings of the survey indicate that the household population in 2016 was 20.7 million consists of 9.7 million males (46.8%) and 11.0 million females (53.2 %).

The survey findings reveal that the estimated average household income per month at national level was Rs. 62,237 and the median household income was Rs. 43,511 in 2016 in Sri Lanka. Mean and median estimated household income increased by 35.7 percent and 41.2 percent) respectively in 2016 with compared to the survey year (2012/13). The estimated average household income per month for urban sector was Rs. 88,692, which rural and estate sector was Rs. 58,137 and Rs. 34,804 respectively. The average estimated household income per month for urban, rural and estate sectors has been increased by 26.9 percent, 40.2 percent, and 15.2 percent respectively with respect to the previous survey year.

The estimated average monthly household income of the households in the poorest 20% (1st and 2nd decile) was Rs.14,843, poorest 40% (1st to 4th decile) was Rs. 22,423, middle 60% (3rd to 8th decile) was Rs. 46,097, and richest 20% (9th and 10th decile) was Rs. 158,072. Estimated average monthly household income in poorest 20%, poorest 40%, middle 60% and richest 20% were increased by 44.9%, 42.3%, 41.4% and 30.2% respectively in nominal terms with compared to the previous survey year (2012/13).

In 2016, the estimated average household per capita income in Sri Lanka was Rs. 16,377 per month. The estimated average income receivers' income per month for Sri Lanka was Rs. 33,894 and median income receivers' income per month was Rs. 23,260. The estimated average number of income receivers per household was 1.8 in 2016. The national value of Gini coefficient for household income was 0.45 in 2016 and it was 0.48 in 2012/13.

According to the 2016 HIES, the estimated average monthly household expenditure was Rs.54, 999 and estimated median household expenditure was Rs.40, 186 in 2016 and increased by 32.7 % and 30.9% respectively against the previous survey year 2012/13.

The estimated average household expenditure for urban sector was Rs. 77,337 and rural sector was Rs 51,377 per month and for estate sector was Rs.34, 851. The estimated average household expenditure per month for urban, rural and estate sectors has been increased by 31.2%, 34.2% and 18.6% respectively from previous survey year respectively.

Among the major categories of household consumption expenditure, the estimated average monthly expenditure on food was Rs. 19,114 and non-food expenditure was Rs.35, 885(including liquor, narcotic drugs and tobacco) in 2016 increased by 22.1% and 39.1% respectively against the previous survey year respectively. The food ratio was 34.8%, down 3.0 percent point compared to the previous survey year 2012/13. The national value of Gini coefficient for household expenditure was 0.41 in 2016 and it was 0.40 in 2012/13.

1. Introduction

The Household Income and Expenditure Survey (HIES) is conducted by the Department of Census and Statistics (DCS) under the National Household Survey Programme (NHSP) of Sri Lanka. The DCS has completed the most recent HIES in 2016 and this publication exposes the final information gathered in this survey. The field work of the survey was carried out during the period from January to December 2016 covering all 25 districts in the country. The HIES 2016 is the ninth in the HIES series and the information in this report is presented at national, sector, province and district levels along with the previous survey findings where applicable to facilitate effective comparisons overtime.

1.1 History

The HIES was started to conduct as Labour Force and Socio Economic Survey (LFSES) in 1980/81 and it was conducted for the second time in 1985/86. The LFSES, through a single survey, provided comprehensive information on labour force, household income and expenditure and demographic characteristics of the households and household population in Sri Lanka. In 1990 the LFSES was separated into the under mentioned 2 individual surveys as the labour force information of the country was more frequently needed.

1. Labour Force Survey (LFS)
2. Household Income and Expenditure Survey (HIES)

The maiden HIES was conducted in 1990/91 as a separate survey with the view of providing information on household income and consumption expenditure in order to measure the levels and to observe the changes of living conditions of people in the country. The HIES information is also used to estimate consumption needs of the country and to compute various other important indicators related to poverty and price indices. Generally the HIES surveys a sample of 25,000 housing units throughout the country to facilitate the information be given at district level. Data is collected at the field in twelve consecutive monthly rounds to capture seasonal variations in income, expenditure and consumption of households. The data collection of the survey is done through direct interviews using the survey questionnaire. At the beginning the questionnaire was included the following three main sections.

1. Demographic characteristics
2. Household expenditure (on food and non-food)
3. Household income (monetary and non-monetary)

The HIES gathers information related to demographic characteristics of the members of the surveyed households, expenditure on food and non-food items and income received by each household member from all the different sources in a compulsory manner. Starting from the HIES 2006/07, the survey questionnaire was further

expanded beyond the collection of demographic, income and expenditure information. It has been introduced 7 new sections to collect almost all the other household information that helps to understand the correct living standards of the households. Those newly introduced areas covered by the HIES starting from the HIES 2006/07 are as follows.

1. School education
2. Health information
3. Inventory of durable goods
4. Access to infrastructure facilities
5. Household debts and borrowings
6. Housing, sanitary and disasters
7. Land and agriculture holdings

1.2 Field operation and control of errors

Approximately 330 field officers (Statistical Officers, Statistical Assistants) who belong to the permanent field staffs of Department of Census and Statistics did the collection of data. Each field officers is in-charge of all statistical activities in an geographical units called District Secretariat Divisions (DSD). These officers were given a thorough training before they were entrusted with the survey operations. Each administrative district comprises with such units and there are altogether 331 DS Divisions in Sri Lanka. In each district, there is a Deputy Director (DD) /Senior Statistician (SSTN) /Statistician (STN) who in charge of the statistical activities in the district and one of the main functions is to supervise the work of field staff.

The main functions of the field staff for this survey

- (a) Update the lists of housing units of the selected blocks (PSUs) and preparation of listing forms (9NHSP) as describe in 1.3.1 under survey methodology.
- (b) Interview the selected households

In addition to this, the following control procedures were adopted to control the non-sampling error and increase to accuracy of the survey estimates.

1. Field supervision of listing forms and updating operation and interviewing the data collection done by field staff by in-charge of district
2. Field activity reviews by Sample Survey Division (SSD) staff
3. Data entry checks, Computer edits and data verification
4. Use several control sheets to do the survey activities on time and increased the accuracy of the data

1.3 Survey methodology

Sample design of the survey is two stage stratified and the Urban, Rural and the Estate sectors in each district of the country are the selection domains thus the district is the main domain used for the stratification. The sampling frame is the list of housing units prepared for the Census of Population and Housing (CPH) 2011.

1.3.1 Selection of Primary Sampling Units

Primary sampling units (PSUs) are the census blocks selected for the survey. The sampling frame, which is the collection of all the census blocks prepared in CPH 2011 in Sri Lanka, is used for the selection of the PSUs at the first stage of the selection.

The PSU selection is done within all the independent-selection domains that are assigned different sample size allocations to total the targeted sample size of 2,500 PSUs. The method of selection of the PSUs at the first stage is systematic with a selection probability given to each census block proportionate to the number of housing units available in the census blocks within the selection domains (PPS).

The selected PSUs are updated to include newly built housing units and to exclude demolished or vacated housing units, which are no longer considered as housing units according to the survey definitions, to capture variation of natural growth and to make necessary adjustments for the same. The PSU updating operation in field is generally done less than one month prior to the survey and it was carried out for the 12 months starting from October 2015 to September 2016 to support the scheduled 12 survey months started from January to December in 2016 for the HIES 2016.

1.3.2 Selection of Secondary Sampling Units

Secondary Sampling Units (SSUs) or Final sampling units (FSUs) are the housing units selected at the second stage from the 2,500 PSUs selected at the first stage. From each PSU, 10 SSUs (housing units) are systematically selected giving each housing unit in the PSU an equal probability to be selected for the survey. The total sample of size 25,000 housing units is resulted at the end of the sampling process and this sample represents the whole country in different probabilities depend on the different sample sizes allocated for the selection domains.

1.3.3 Sample allocation

Allocation of the number of PSUs or determining the sample sizes for the districts is made proportionate to the number of housing units and the standard deviations of the mean household expenditure values reported in the respective districts in previous surveys (Neymann Allocation). Sector allocation of the district sample is made proportionate to the square root of the sizes of the respective selection domains (Urban, Rural and Estate sectors in the district). The sample of PSUs within the selection domain is equally distributed among the 12 survey months and the monthly sample too is equally dispersed among all the weeks in the month assigning a specific week for each PSU for the survey activities.

Table 1.1: Sample allocation and completion by district

District	Housing units		Households responded
	Selected	Responded	
Sri Lanka	25,640	21,646	21,756

1.4 Estimation procedure

Let \hat{X}_j be the estimate of total of any given characteristic for j^{th} district and this could be given by,

$$\begin{aligned}\hat{X}_j &= \frac{1}{m_{j(u)}} \sum_{h(u)=1}^{m_{j(u)}} \frac{1}{P_{h(u)}} \frac{N_{h(u)}}{n_{h(u)}} \sum_{i(u)=1}^{n_{h(u)}} X_{hi(u)} \\ &+ \frac{1}{m_{j(e)}} \sum_{h(e)=1}^{m_{j(e)}} \frac{1}{P_{h(e)}} \frac{N_{h(e)}}{n_{h(e)}} \sum_{i(e)=1}^{n_{h(e)}} X_{hi(e)} \\ &+ \frac{1}{m_{j(r)}} \sum_{h(r)=1}^{m_{j(r)}} \frac{1}{P_{h(r)}} \frac{N_{h(r)}}{n_{h(r)}} \sum_{i(r)=1}^{n_{h(r)}} X_{hi(r)}\end{aligned}$$

Where,

$m_{j(u)}$ = Number of census blocks selected from the urban sector of the j^{th} district for the survey

$P_{h(u)}$ = Selection probability of the h^{th} census block in the urban sector.

$$P_{h(u)} = \frac{S_{jh(u)}}{\sum_{h=1}^{M_{jh(u)}} S_{jh(u)}}$$

$S_{jh(u)}$ = Measure of size (number of housing units) of the h^{th} census block in the urban sector of the j^{th} district.

$M_{jh(u)}$ = Total number of census blocks in urban sector of the j^{th} district.

$N_{h(u)}$ = Total number of housing units listed in the h^{th} census block in the urban sector.

$n_{h(u)}$ = Number of housing units selected from the h^{th} census block in the urban sector.

$X_{hi(u)}$ = The observed value for the i^{th} sample household in the h^{th} census block in the urban sector.

$m_{j(r)}, P_{h(r)}, S_{jh(r)}, M_{jh(r)}, N_{h(r)}, n_{h(r)},$ and $X_{hi(r)}$ are corresponding terms for the rural sector and $m_{j(e)}, P_{h(e)}, S_{jh(e)}, M_{jh(e)}, N_{h(e)}, n_{h(e)},$ and $X_{hi(e)}$ are corresponding terms for the estate sector.

The estimate for the total value of the characteristic X for the country (25 districts) could be given by,

$$\hat{X} = \sum_{j=1}^{25} \hat{X}_j$$

Note:

The estimation procedure given above is for the total sample covered in 12 monthly rounds and the estimates given in this publication is based on the sample covered in 25 districts.

1.5 Adjustment for unit non-response

The occurrence of unit non-response was determined by examining the final result code recorded under data control section of the survey schedule. Based on the final result codes the households were grouped into the following categories, which were used as a basis for adjusting for the unit non-response.

Category and description	Result code
1. Schedule completed	1
2. Housing unit demolished or vacant	6
3. Unable to complete schedule, refusal, temporarily away etc.	2,3,4,5,9

Category 1 and 2

These were considered as fully accounted for as a schedule was completed to the extent required by the situation at the time of interview and therefore no adjustment was necessary.

$$\hat{X}_{jk(u)} = \frac{1}{m_{jk(u)}} \sum_{h(u)=1}^{m_{jk(u)}} \frac{1}{P_{h(u)}} \frac{N_{h(u)}}{n_{h(u)}} \sum_{i(u)=1}^{n_{h(u)}} X_{hi(u)}$$

Category 3

This is incomplete therefore a non-response adjustment was made for this category. The assumption made here for the adjustment of non-response was the proportion of households in category 3 is the same as the corresponding proportion for sample households in category 1. This assumption is applied on a block-by-block basis separately for urban, rural and estate sectors.

The block weight before adjusting for unit non-response was

$$W'_h = \frac{1}{m_j} \sum_{h=1}^{m_{jk}} \frac{1}{P_h} \frac{N_h}{n_h}$$

Where

N_h = Total number of housing units listed in block h.

n_h = Number of housing units selected in block h.

The revised weight should take the form

$$W_h = W'_h \cdot \left(\frac{n^1_h - n_{h2}}{n_{h1}} \right)$$

Where

n_{h1} = Number of sample households in category 1.

n_{h2} = Number of sample households in category 2.

n^1_h = Total number of households in all the 3 categories (category 1, 2 and 3)

1.6 Definitions and Concepts

Readers should aware about the frequently used definitions of the survey terms prior to interpret or compare the data. The definitions of the terms frequently used in this report are given below.

Household

A household may be a one-person household or a multi person household. A one-person household is a unit where a person lives by himself and makes separate provision for his food, either cooking himself or purchasing. A multi person household is a group of two or more persons who lives together and has a common arrangement for cooking and partaking food. Boarders and servants who share the meals and housing facilities with other members of the household are also considered as members of the household.

Head of the household

Head of a household is a person who usually resides in the household and is acknowledged by the other members of the household as the head of the household.

Residential sector

The residential sector can be either Urban sector, Rural sector or Estate sector.

Urban Sector

Area governed by either Municipal Council (MC) or Urban Council (UC) is considered as Urban Sector.

Estate Sector

Plantation areas, which are more than 20 acres of extent and having not less than 10 residential laborers, are considered as estate sector.

Rural Sector

Residential areas, which do not belong to the Urban sector or Estate sector described above, are considered as Rural sector.

Marital Status

The marital status recorded was the current status at the time of the survey. A person whose marriage was registered is classified as married (registered). If the marriage has not been registered according to the law but the person claimed to be married according to the custom or repute then it is also classified as married (customary).

A person is regarded as divorced only if a divorce has been obtained in a court of law. A person who has obtained a judicial or legal separation in a court of law is classified as separated (legally). On the other hand if a person had been voluntarily separated without obtaining a court order then such persons fall into the same category classified as separated (not legally)

Educational attainment

This refers to the highest academic qualification obtained and the professional and technical qualifications are excluded. In the case of person with no such qualifications the highest grade or class passed in school is considered as the level of education or educational attainment.

Share of income

$$\text{Share of income} = \frac{\text{Total income of the households or persons belong to the group}}{\text{Total income of all households or persons in all groups}}$$

Household size

Number of persons usually living in the household including boarders and servants etc. is defined as the household size.

Household income deciles

Income deciles are income groups whose boundaries are defined as to get 10 percent of the total number of households fallen into each group.

Household expenditure deciles

Expenditure deciles are defined similarly as income deciles, but expenditure values are used instead of income values.

Gini Co-efficient

Gini Co-efficient, which is the most popular indicator used to measure the depth of inequality of a distribution is defined as the ratio of the area between the diagonal and the Lorenz curve to the triangular region underneath the diagonal.

Income receiver

A person who is 10 or more years old and his or her calculated total monthly income received from any source is more than or equal to Rs.200 then he or she is defined as an income receiver in this survey.

Food Ratio

$$\text{Food ratio (\%)} = \frac{\text{Household expenditure on food and drink}}{\text{Total household expenditure (food and drink and non-food)}} \times 100$$

Dependency ratio

In this survey, dependency ratio is defined as follows

$$\text{Dependency ratio} = \frac{\text{Persons aged less than 15 years and above 60 years}}{\text{Persons aged 15 – 59 years}}$$

1.7 Reliability of the estimates

The actual sample which is based for this publication is limited to 21,756 households surveyed in total 12 months and the estimations given in HIES are mostly limited to district level to preserve the reliability of them.

The mean Household expenditure (Rs. / monthly) to calculate reliability statistics for the district level estimations is given below to build confidence among advanced data users and to support future sample design activities of similar type of surveys.

Table 1.3: Estimation, Standard error, coefficient of variation and 95% confidence intervals of mean Household expenditure (Rs. /month) by district - 2016

District	Mean(household expenditure per month)	Std. Err.	Coefficient of Variation (CV)	[95% Conf. Interval]	DEFF	
Sri Lanka	54,999	674	1.2	53,677	56,321	2.4

Kegalle	48,511	1,999	4.1	44,591	52,431	1.5

2. Income

The Household Income and Expenditure Survey (HIES) defines household income as total income received by all members of the household, either in cash (monetary income) or in kind (non-monetary income) from all the sources.

The household income sources are investigated and reported under the following 7 main categories in the survey questionnaire.

1. Wages and salaries
2. Agricultural activities (seasonal crops)
3. Agricultural activities (non-seasonal crops)
4. Non-agricultural activities
5. Other cash receipts such as pensions, dividends, rents, interest amounts received from various types of savings, current remittances and local and foreign transfers
6. Income by chance or adhoc gains such as compensations, lottery wins etc. and sales of goods and savings.
7. Income in-kind

Obtaining income information from individuals and households is a difficult task as many people reluctant to disclose many of them and often under report. Therefore to ease the field work, which is the most challenging activity of the survey, and to gather more accurate and reliable data, income information of the household members were collected individually in all the 6 income sections (income in-kind collects at household level) tactically arranged in the HIES questionnaire.

The income in kind is mostly estimated values of the household consumed items such as home grown fruits and vegetables, firewood collected etc. and estimated rental values of owner occupied housing units gathered in the consumption expenditure section of the survey questionnaire.

An extra column has been provided at household level in the expenditure section to record estimated values of household consumed goods and services received fully or partially free of charge or purchased on price concessions provided by employers etc. This information of income in-kind along with the monetary income collected in the 6 income sections are aggregated and summarized in order to estimate, average monthly household income (mean household income), median household income, per capita household income, income receivers' household income and various other indices such as, Gini coefficients, shares of household income etc. at many different geographic and social domain levels.

2.1 Household Income

The mean (average) and median household income is the prime statistics used to compare income values reported in different domains over time. Mean household income is the value obtained by dividing the total aggregated household income by total number of households in a domain or in an area. Median income is the income value at which the income distribution is divided into two equal size groups. This middle point or the median is important as always the income of one half of the population falls either above or below that value and the median household income is a better indicator than the mean (average) household income as the median is not dramatically affected by extreme or unusually high or low values. However both the mean and median are based on all the households in the population.

The survey results revealed that the mean monthly household income in Sri Lanka was Rs. 62,237 in 2016. Considering the average monthly household income among three sectors, the value of urban, rural and estate sectors are Rs.88,692, Rs.58,137 and Rs.34,804 respectively.

When the provinces are compared, the Western province which reported the highest household income level is more than 2 times higher than the values reported by the Eastern province which reported the lowest values for both the median and the mean income.

Considering the district figures, Colombo district has indicated the highest monthly household income for both mean and median. (Rs104,581 for mean and Rs. 70,000 for median) The median value indicates that out of the total household in Colombo district, half of them receive more than Rs. 70,000 per month and the other half get less than that amount during the period under review. Accordingly for all other districts, same interpretation can be made by reading the particular median values.

The decile groups are easy to understand about an income distribution, particularly the inequality of the distribution. The boundary values of the decile groups break a distribution into 10 equal size groups. The first decile holds the 10 percent of the total population which contain the lowest values of the distribution are attributed to. So to obtain the range values of the household income deciles, all the households are arranged in ascending order according to the income and divided into 10 equal sized groups. Table 2.2 and 2.3 shows the mean and median monthly household income values reported within the national and sector level household income deciles respectively.

Table 2.1: Mean and median monthly household income by sector, province and district – 2016

Figure 2.1: Mean and median of monthly household income by sector 2016

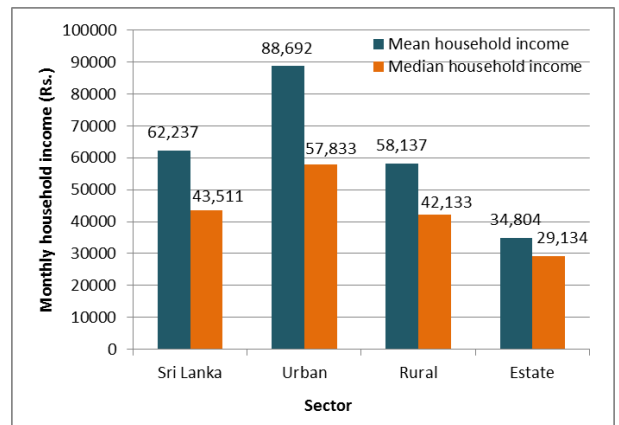

Table 2.2: Mean and median monthly household income by national household income decile -2016

Decile group	Monthly household income range (Rs.)	Median income (Rs.)	Mean income (Rs.)
All groups			
1	Less than or equal 15,321	9,916	10,419
2	15,322 - 23,518	19,766	19,914
3	23,519 - 30,003	26,774	26,810
4	30,004 - 36,445	33,243	33,204
5	36,446 - 43,511	39,890	39,855
6	43,512 - 51,862	47,534	47,462
7	51,863 - 63,700	57,490	57,288
8	63,701 - 81,371	71,651	71,399
9	81,372 - 1,15,648	96,021	95,000
10	More than 1,15,648	220,197	162,460

The estimated average monthly household income of the households in the poorest 20% (1st and 2nd decile) was Rs.14,843, poorest 40% (1st to 4th decile) was Rs. 22,423, middle 60% (3rd to 8th decile) was Rs. 46,097, and richest 20% (9th and 10th decile) was Rs. 158,072. Estimated average monthly household income in poorest 20%, poorest 40%, middle 60% and richest 20% were increased by 44.9%, 42.3%, 41.4% and 30.2% respectively in nominal terms with compared to the previous survey year (2012/13).

9	81,372- 115,648	10.0	14.0	9.5	4.0	15.4	15.2	15.6	11.3
10	More than 115,648	10.0	18.3	8.7	1.4	35.4	51.3	31.2	6.3

Table 2.3 implies the distributions of shares of income out of total household income among deciles for each sector along with the national level distribution. According to the table, the 10th decile groups of all the sectors and all island held very high shares of household income and the corresponding figures for urban, rural and estate sectors are 38.6 percent, 33.7 percent and 26.7 percent respectively.

Table 2.4 shows the households shares and income shares by the national household income deciles to total number of households and total household income respectively at national and sector levels. According to the Table 2.4, 18.3 percent of the urban sector households received 51.3 percent of the total urban sector household income. All the households in the tenth national decile group received over Rs. 115,648, household income per month. On the other hand when the Table 2.4 is carefully examined, it shows that 64.6

percent of the estate sector households are among the poorest 40 percent households of the country in 2016 and they have contributed to 39.1 percent of the total household income in the estate sector .

2.2 Household per capita income

Household per capita income is frequently used as a better indicator to understand and compare the country's standard of living over time. The per-capita income varies, in reverse to the household income with the household size. Lower household size shows the higher per-capita income. Per capita income in a domain is calculated by dividing the estimated total household income by the estimated number of household population in the domain.

Table 2.5 shows the mean and median monthly household per capita income of the country by sector, province and district levels in 2016. The mean monthly household per capita income at national level was Rs.16,377 and that of median value was Rs. 11,307 during the period under review. Figure 2.2 depicts that the greater disparity of monthly household per capita mean income among sectors than those of household per capita median income.

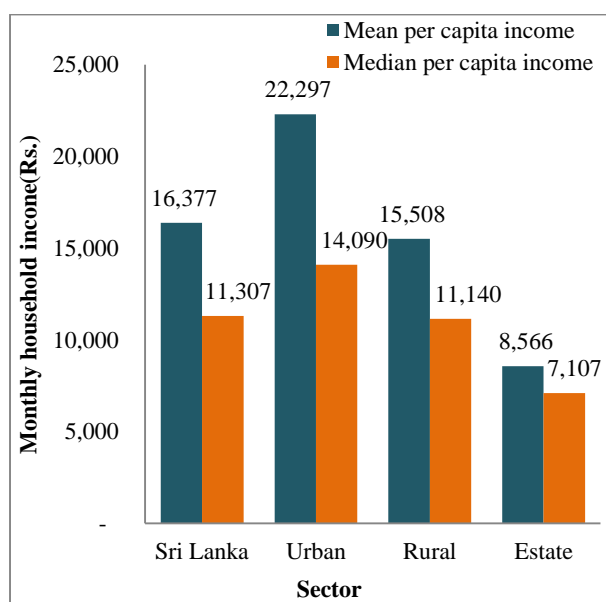

Figure 2.2: Mean and median monthly household per capita income by sector - 2016

Table 2.5: Mean and median monthly household per capita income by sector, province and district – 2016

The median household per capita income in Sri Lanka is reported as Rs. 11,307 in 2016. Table 2.6 shows the distribution of median and mean household per capita income, share of household per capita income and household size by household per capita income decile. According to the Table 2.6, the share of household per capita income, approximately 50.4 percent of the total income has been distributed among richest 20 percent of the household population in the country. However, 29.4 percent of the total income has been shared by population who are in 1st to 6th deciles (60 percent of the total population who receive the lower income than the rest) .

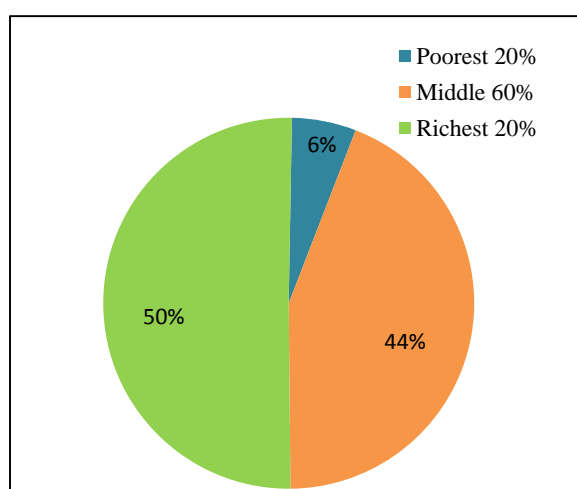

Figure 2.3: Share of household per capita income by socio economic group - 2016

2.3 Income receivers' income

In order to obtain the income receivers' income, the HIES records the household income, received from all the sources, by source and person. The income receivers' income is the sum of the income values recorded in each income section arranged according to the income source in the survey questionnaire.

If a person is less than 10 years old or aggregated total monthly income is less than Rs. 250, then he was not defined as an income receiver by the HIES 2016 and such income values were added to the income of the heads of the respective households. It is obvious that the household income is so built on the income of the income receivers in the household and thus the total household income of the country is equal to sum of the income values recorded by the total income receivers at all of the source in the sections of the survey questionnaire.

2.4 Household size

Number of persons, including boarders and servants usually live in a household is the definition given for the household size. According to the survey the mean household size in Sri Lanka has come down to 3.8 persons per household in 2016. Table 2.6 shows that the household size gradually decreased from about 4.1 persons to about 3.2 persons with the increase of the household income across the first to tenth household per capita income decile group in Sri Lanka.

The analysis of the income receivers reports that the average monthly income receivers' mean income and median income were Rs. 33,894 and Rs. 23,260 in 2016 respectively. Table 2.7 reported that the income receivers' mean and median income in urban sector was more than two times higher than those were in the estate sector. Table 2.9 shows the mean and the median monthly income receivers' income by national income receivers' income decile.

Figure 2.4 illustrates the distribution of mean and median monthly income receivers' income for each district.

According to the Figure 2.4 the gap between mean and median income receivers' income is considerably high in, Colombo, Gampaha, Kurunegala, Puttalam, Anuradhapura and Polonnaruwa districts. That means relatively greater number of people in those districts earns large amount per month than those in other districts.

Figure 2.4: Mean and median monthly income receivers' income by district 2016

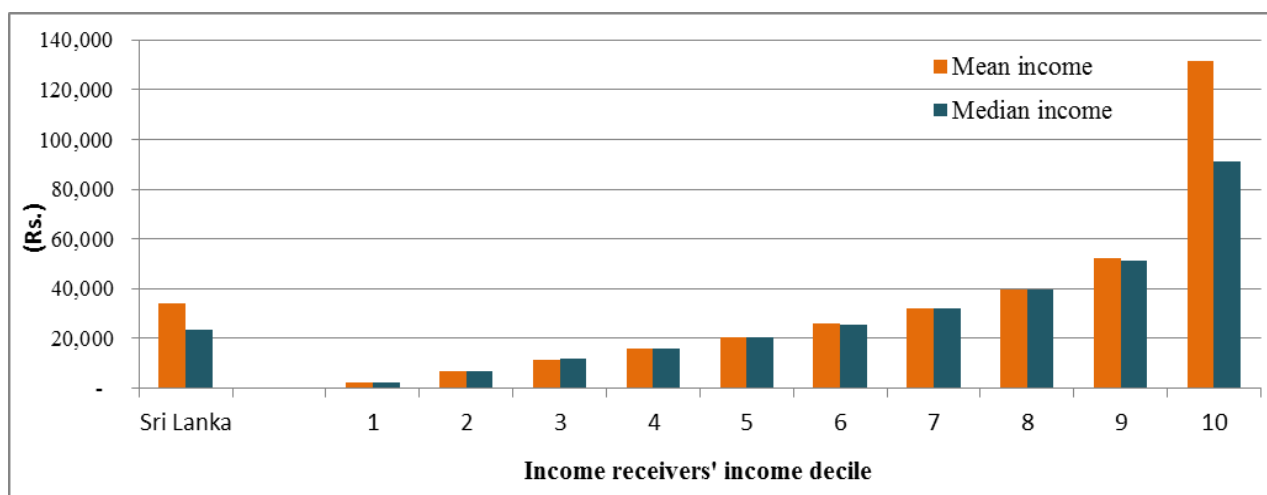

Figure 2.5: Mean median income distribution of income receivers' income by income receivers' income decile – 2016

2.5 Inequality of household income

The simplest but a popular way to understand the income inequalities is dividing the population into income quintiles and analyzing the proportions of income calculated at each quintile from poorest to richest. A national household income quintile represents 20% or one fifth of the total households in Sri Lanka. The highest or the fifth quintile holds the richest 20% households whereas the first is for the poorest 20%. Middle-income group consist of the households, which belong to second, third and fourth quintiles. The table 2.10 shows the percentage share of income distributed for each income group at sector province and district level.

Figure 2.6 shows that the richest 20 percent (9th and 10th deciles groups) was receiving nearly 51 percent of the total household income of Sri Lanka and the poorest 20 percent (1st and 2nd deciles groups) was receiving only 5 percent while middle 60 percent was receiving 44 percent in 2016. The poorest 40 percent (see Table 2.10) the corresponding figure was 14.4 percent.

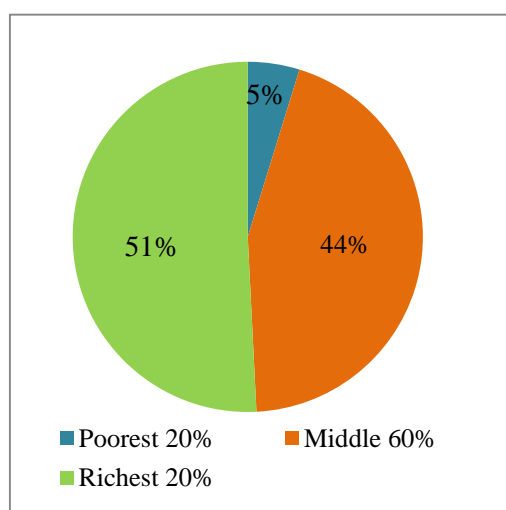

Figure 2.6: Share of household income by household income quintiles - 2016

2.5.1. Gini coefficient

Gini coefficient (Gini) is one of the widely used indicators to measure the depth of inequality of an income distribution. The Gini is based on the Lorenz curve, which plots cumulative proportions of the total income of the population in y-axis and cumulatively share of the population from the lowest to highest income in x-axis. The Gini can take values between zero and one and the line drawn at 45 degrees or the diagonal of the Lorenz curve represents a distribution with zero Gini value, which indicates equal, or zero level of inequality of the distribution. The Lorenz curve shown in Figure 2.7 is based on the monthly total household income values reported in HIES 2016.

The survey results revealed that the Gini of the mean household income per month in Sri Lanka is 0.45. The relevant figures reported for urban, rural and estate sectors are 0.48, 0.44 and 0.36 respectively. This mean income disparity between households in estate sector is relatively lower than those are in other two sectors.

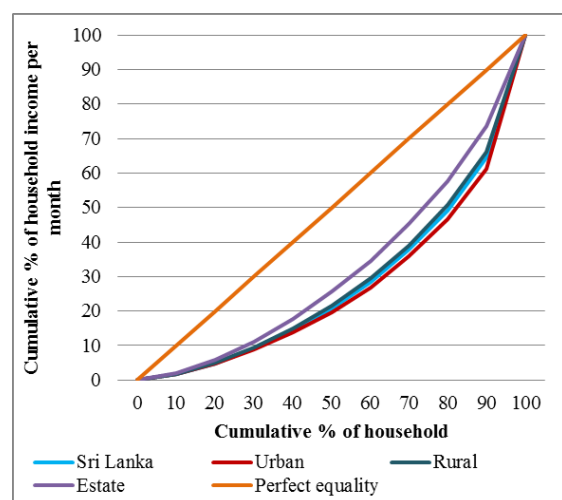

Figure 2.7: Lorenz curve for household income by sector - 2016

Table 2.11 presents the Gini coefficients of household income, per capita income and income receivers' income by sector, province and district. The table reveals that, there is a considerable difference of inequality values among sectors, provinces and district. When consider the sectors, estate sector reports the lowest Gini value (0.36) for household income and among provinces, Sabaragamuwa Province reports the lowest Gini value (0.41) for household income. When consider the districts Kilinochchi district report the lowest (0.37) and Puttalam reports the highest Gini coefficient (0.47) for household income.

Table 2.11: Gini coefficients for mean household income, per capita income and income receivers' income by sector, province and district - 2016

2.6 Source of income

Income is received in two main ways, either in cash or in-kind. The cash is identified as monetary and the in-kind is identified as non-monetary. Income from wages and salaries, agricultural activities (seasonal and non-seasonal crops), non-agricultural activities, and other cash income (which includes pension payments, disability payments, Samurdi, local and foreign transfers, windfall income such as lottery wins, compensations etc.) are identified as monetary income. The non-monetary income is the estimated value of goods and services received in-kind and consumed within the survey reference period. Homegrown fruits form this value and vegetables, firewood, home

consumed quantities of the product of agricultural activities, and other goods or concession values received from employer or other parties. Estimated rental value of owner occupied housing units or freely occupied housing units are also included under non-monetary income.

The mean household income per month for Sri Lanka is Rs. 62,237 at national level, out of the total household income, Rs. 52,979 or 85.1 percent of the income is received as monetary income in 2016. As usual, major part of the monetary income has been recorded from wages and salaries and it is about 38.2 percent of the total household income. (Table 2.12)

Table 2.12: Average monthly household income by main source of income – 2016

3 Expenditure

Household expenditure data were collected in three major sections of the survey questionnaire.

1. Expenditure on food.
2. Expenditure on non-food.
3. Expenditure incurred by boarders and domestic servants.

Under food expenditure, all the food items consumed by the household during the reference period (one week) were collected. For non-food expenditure, all non-food items and services purchased by the household during the given reference period were collected. Personal expenditure of boarders and domestic servants who live in the household is reported according to the related expenditure group in a separate section of the schedule.

To obtain more accurate data, the expenditure sections of the schedule were divided into 35 sub-groups. Of that total 19 sub-groups are included under the section of expenditure on food such as cereals, prepared food, vegetables, fish, meat etc. and the rest of 16 sub-groups are included under the section of non-food expenditure. i.e. housing, fuel and light, health, durable goods etc.

To gather more reliable information on expenditure, food expenditure was collected for 7 consecutive days from each household selected in the sample. But non-food expenditure was collected for different reference periods varying from one month to twelve months.

3.1 Household expenditure

According to the Table 3.1 the average monthly household expenditure is Rs. 54,999 per month for Sri Lanka in 2016. When residential sectors (Urban, Rural and Estate) are compared, households in urban sector have spent Rs. 77,337 per month and households in rural sector have spent Rs. 51,377 per month. Households in Estate sector have spent Rs. 34,851 per month, which is the lowest value among sectors.

Table 3.1 also shows the monthly mean and median total household expenditure by sector, province and district. When compared the mean household expenditure by province, it shows that the highest household expenditure has reported from Western province (Rs. 74,505 per month) and lowest households expenditure has reported from Eastern province (Rs 38,407 per month). When districts are compared the highest mean household expenditure per month was reported from Colombo district (Rs. 90,670 per month) while the lowest mean household expenditure was reported from Kilinochchi district (Rs.28,483 per month).

Kegalle	48,511	38,025

Table 3.2 shows that the shares of expenditure to total expenditure by household expenditure deciles calculated for Sri Lanka, urban, rural and estate. The shares of expenditure to total expenditure among deciles calculated for Sri Lanka, urban and rural sectors show a slightly similar pattern but estate sector has a different pattern. In Sri Lanka, urban and rural sectors

almost 50.7 percent and 53.3 percent of total expenditure respectively shared by 80 percent of households which are in first 8 decile groups, however in the estate sector, in the same decile groups (households in first eight deciles) 61.9 percent of total expenditure is shared by 80 percent of households.

Table 3.2: Share of household expenditure to total household expenditure by sector and by expenditure decile – 2016

Decile Group	Sri Lanka		Urban		Rural		Estate	
	Household expenditure range (Rs.)	Share of expenditure (%)	Household expenditure range (Rs.)	Share of expenditure (%)	Household expenditure range (Rs.)	Share of expenditure (%)	Household expenditure range (Rs.)	Share of expenditure (%)

3.2 Household per capita expenditure

The household per capita expenditure in a domain is calculated by dividing the estimated total household expenditure by the estimated number of the population in the domain. Table 3.3 shows the mean and median of monthly household per-capita expenditure by sector, province and district levels in 2016. In 2016 the mean per capita expenditure for the entire country is Rs.14, 473 and median is Rs. 10,429. The table also states that the mean monthly per capita expenditure in urban, rural and estate sectors are Rs.19,442, Rs.13,705 and Rs.8,577 respectively. Furthermore, the highest mean and median per capita expenditure (mean Rs.22,752 and median Rs.16,052) has reported from Colombo district while the lowest reported from kilinochchi district (mean Rs.7,285 and median 6,097). Figure 3.2 shows graphical representation of the mean and median household per capita expenditure by sectors in 2016.

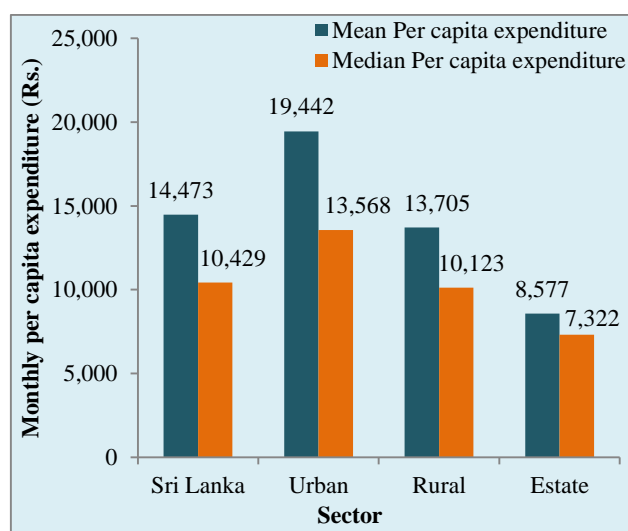

Figure 3.2: Mean and median monthly household per capita expenditure by sector - 2016

3.3 Inequality of household expenditure

Gini coefficient of mean household expenditure in Sri Lanka is reported as 0.41 and Gini coefficient for mean per capita expenditure reported as 0.40 in 2016 survey period.

When sectors are considered, the lowest value for the Gini coefficient of household expenditure is reported in estate sector (0.30). This nature of inequality within the sectors can be seen for the per capita expenditure as well. This reflects the less disparities of consumption pattern among the households and people in estate sector than the other two sectors.

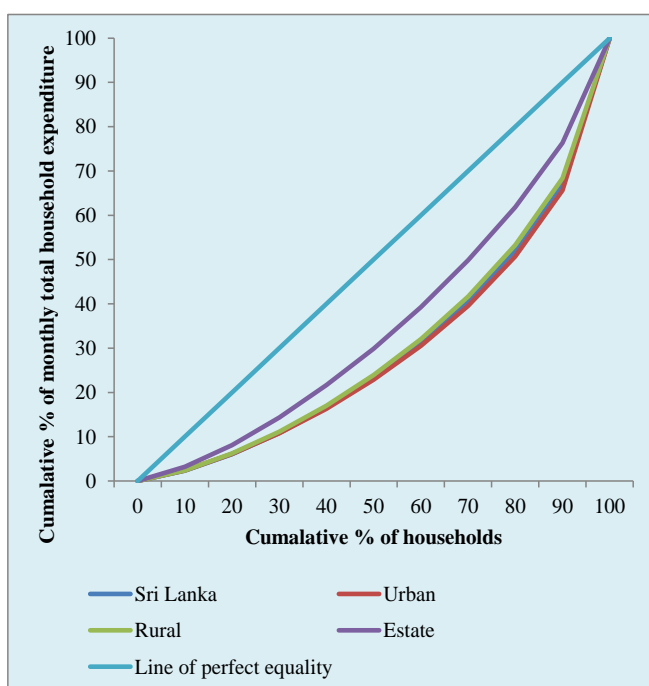

Figure 3.3: Lorenz curve for household expenditure by sector - 2016

Table 3.4: Gini coefficients for mean household expenditure and mean per capita expenditure by sector, province and district - 2016

3.4 Food expenditure

Household food expenditure is contributed by all the expenditure on food and drink (excluding liquor, drug and tobacco). The average household expenditure on food and drink was Rs19,114 for 2016. The graphical representation of food and drink expenditure by district is given by Figure 3.4 and the values by sector, province and district is given by Table 3.5.

The major food groups consists with Cereals, prepared food, pulses, vegetables, Yams and other, meat, fish, dried fish, eggs, coconuts, condiments, milk & milk food, fat & oil, sugar Juggery & treacle, fruits, confectionery & short eats ,beverages (non-alcoholic) and other food.

when comparing the cereals consumption pattern by sectors according to the Table 3.5, the highest expenditure on consumption of cereals is reported from estate sector (Rs. 4,400) and the lowest is reported from urban sector (Rs. 2,740). When compare the expenditure on consumption of cereals by district,

the highest consumption is reported from Nuwara Eliya (Rs.4,527) and the lowest (Rs.2,385) reported from Galle.

It is clear that the households in urban sector have spent more (Rs. 3,980) for prepared food than the households in rural and estate sector. The corresponding figures for rural and estate sectors are Rs. 1,975 and Rs. 928 respectively. Among the districts the highest consumption for prepared food is reported from Colombo district as Rs. 4,934 while the lowest (Rs.980) is reported from Kilinochchi district.

Table 3.6 depicts the percentage distribution of average monthly household expenditure on same major food groups given in Table 3.5. The households in Nuwara Eliya district have spent 24 percent for cereal from total food expenditure, which is highest percentage among the districts. On the other hand, Colombo district shows the highest percentage of expenditure on prepared food (16.9 percent of total food expenditure)

3.5 Non-food Expenditure

Housing, fuel and light, personal care expenses, health expenses, transport, communication, education, recreation, entertainment & cultural activities, non-durable household goods, household services, clothing & textile, foot wear & other personal effect, durable household goods, liquor, drugs and tobacco and other expenses are the major non-food groups. Table 3.8 and Table 3.9 shows the average monthly household expenditure on major non-food expenditure group and their percentage values to total non-food expenditure by sector province and district respectively.

According to the Table 3.8 average monthly non-food expenditure per household is Rs 35,885 (including the expenditure on liquor, drugs and tobacco) When districts and provinces are compared the lowest total non-food expenditure values was reported from kilinochi district (Rs.13,795) and Eastern province (Rs, 18,917). The highest non- food expenditure values were reported from urban sector, Western province and Colombo district when compared sectors, provinces and districts separately. The Figure 3.5 graphically

illustrates the distribution of non-food household expenditure by district.

Table 3.10 shows the average monthly household expenditure on major non-food expenditure group by national household expenditure decile. Households in the 1st decile group have spent Rs. 4,844 per month for non-food items and the corresponding figure for the 10th decile group is Rs149,868. It is very clear a high variation can be observed between the lowest decile group and the highest decile group for expenditure on non-food items.

Table 3.11 gives the percentage expenditure values of the expenditure given in Table 3.10. When compare percentage household expenditure values on non-food items, it shows that the household in the 1st decile group have spent the highest percentage from their total expenditure (36.5%) for housing rent and the household in the 10th decile group have spent highest percentage from their total expenditure for other adhoc(rarely) expenditure (20.4%). .

Figure 3.5: Average monthly household expenditure on non-food by district – 2016

Table 3.8: Average monthly household expenditure on major non-food expenditure groups by sector, province and district – 2016

Sector/Province /District	Total non food expenditure (Rs.)	Housing (Rs.)	Fuel & light (Rs.)	Personal care & Health expenses (Rs.)	Transport (Rs.)	Communication (Rs.)	Education (Rs.)	Cultural activities and entertainme (Rs.)	Household non-durable goods and household (Rs.)	Clothing textiles & foot wear (Rs.)	Household durable goods (Rs.)	Other miscellaneous expenses (Rs.)	Other adhoc (rarely)exp ensus (Rs.)	Liquor,drugs &tobacco (Rs.)

9	70,658-99,112	81,748	82,755	26,130	56,625	90,433
10	More than 99,112	136,111	180,549	30,660	149,888	184,574

Table 3.12 shows the mean and median household expenditure, mean household food and non-food expenditure and mean household income by national household expenditure decile – 2016. It proves that the average monthly expenditure of a household in the expenditure group of tenth decile (Rs. 180,549) is almost fourteen times greater than that of the first decile group received (Rs. 12,784). As well as when consider the mean household income by expenditure decile group it is evident that the tenth decile group has received the average household income ten times greater than that of first decile received.

Table 3.13 indicates the changing pattern of average monthly mean household expenditure, mean household food and non-food expenditure and mean household income by national household income decile. The Table 3.13 reveals that from 1st decile to 5th decile mean household expenditure is higher than the mean household income. However, from 6th decile onwards mean household expenditure is less than mean household income.

Table 3.13: Monthly mean household expenditure, household food and non-food expenditure and household income by national household income decile – 2016

Decile group	Income decile	Median household expenditure (Rs.)	Mean household expenditure (Rs.)	Mean food expenditure (Rs.)	Mean non food expenditure (Rs.)	Mean household income (Rs.)

3.6 Food and non-food ratio

The ratio of expenditure on food and drink (excluding liquor, drugs and tobacco) to total expenditure is called the food ratio and it is generally presented as a percentage.

$$\text{Food ratio (\%)} = \frac{\text{Household expenditure on food \& drink}}{\text{Total household expenditure (on food \& drink and non-food)}} \times 100$$

The same method is used to calculate non-food ratio by changing household expenditure on non-food instead of household expenditure on food and drink. (The expenditure on liquor, drugs and tobacco is not considered as a part of food and drink expenditure, but it is considered as non-food expenditure).

Average monthly household expenditure for Sri Lanka is Rs. 54,999. From this value, Rs.19, 114 is spent on food and drink, which is about 34.8 percent of the total expenditure and it is defined as the food ratio. The non-food expenditure is Rs.35, 885 which is 65.2 percent of total expenditure defined as non-food ratio.

Table 3.14 shows the food ratio and non-food ratio by sector, province and district. When comparing the food ratio by district, the lowest food ratio reported from Colombo district (28.7 percent) while the highest food ratio is reported from Batticaloa district (57.1 percent) in 2016. It is clear that those who live in Colombo district spend more non-food however those who live in Batticaloa district spend more on food and drink.

This does not imply that the households in Colombo district spend fewer or inadequate amounts on food than the household in Batticaloa district. The expenditure values for food and drink in Colombo and Batticaloa districts are Rs. 26,066 and Rs. 18,721 respectively (see Table 3.5).

Table 3.14: Food ratio and non-food ratio by sector, province and district - 2016

3.7 Consumption of selected food items

Cereals (rice, wheat flour, etc.) and prepared food are the two major groups, which are consumed in large quantities, rather than other major food groups in Sri Lanka.

Rice, wheat flour and bread are highly consumed food items in Sri Lanka. Table 3.15 shows the expenditure values of some selected food items by national household expenditure deciles.

Table 3.16 gives the consumption quantities for those selected food items

The households in the 10th decile group significantly spent more money for the food items when compare with the households in the first decile group (Table 3.15). The consumption quantities of more items have increased from first decile to 10th decile (Table 3.16).

3.7.1 Consumption of rice

When comparing the rice consumption pattern among the sectors, households in rural sector show the highest consumption of Kekulu rice (red and white) and household in urban sector consumed the lowest quantity of Kekulu rice (red and white).

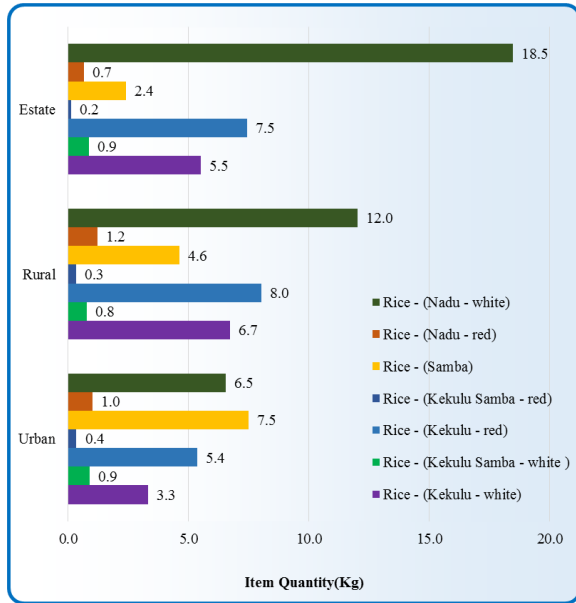

Figure 3.6: Average monthly household consumption of rice by sector – 2016

Figure 3.6 shows that the highest consumption of Nadu rice- (white) was reported from estate sector (18.5 kg) and the lowest consumption was reported from urban sector (6.5 kg).

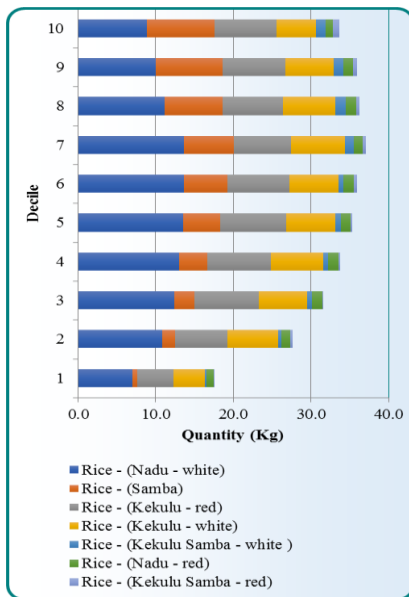

Figure 3.7: Average monthly household consumption of rice varieties by national household expenditure decile – 2016

Figure 3.8 shows the average monthly household consumption quantities of wheat flour, rice flour and bread (normal) by district

3.7.2 Consumption of wheat flour

The average monthly consumption of wheat flour was reported as 1.9 kg per month per household in Sri Lanka. (Table 3.17) The highest consumption of wheat flour per household per month was reported from Estate sector, and among the districts, Jaffna, Kilinochchi, Mannar, Vavunia and Nuwara Eliya.

3.7.3 Consumption of bread

Table 3.17 B shows that the average monthly household consumption quantity of bread was 3.6 kg per month in Sri Lanka in 2016. When sectors are compared it can be noticed that the households in urban sector consumed large quantity of bread which was reported as 5.3 kg per month per household.

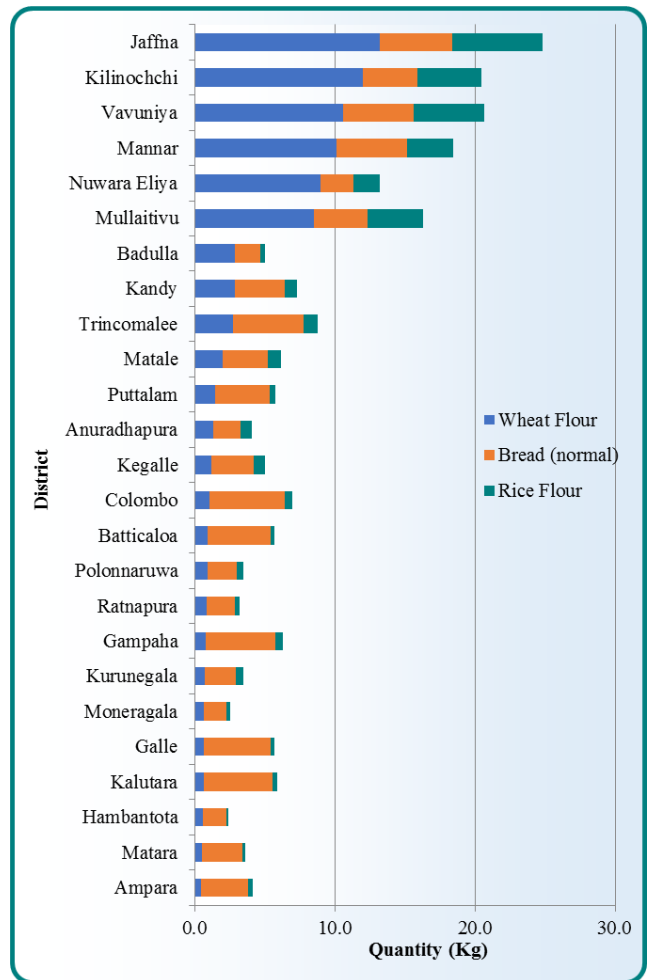

Figure 3.8: Average monthly household consumption quantities of wheat flour, rice flour and bread by district - 2016

4. Indebtedness

Household debt is money borrowed by individuals, generally from banks, financial or lending institutions from government and private sectors, associations / societies established in work places, individual money lenders, and retail outlets. The borrowing of money includes mortgages, higher purchases, personal loans, credit card balances, the money owing to pay to retail outlets for purchasing of daily consumable needs.

Information of indebtedness of households has been collected during the HIES survey. The following information gathered reveals the indebtedness by members of the household at the time of survey.

1. Source of the lending
2. Total amount outstanding
3. The reason for borrowings

Table 4.1 depicts the percentage of households reported in indebtedness at the time of the survey by sectors, provinces and districts. According to the statistics gathered, the highest percentage of indebted households reported from Vavunia district and the least percentage of indebted households reported from Kilinochchi district.

Table 4.2 shows the mean household debt per indebted household by lending source, sector, province and district. Table 4.3 shows the number of indebted households by reason for debts. Here, one household might be indebted by more than one reason

5. Poverty

Department of Census and Statistics was established the Official Poverty Line (OPL) to measure poverty in Sri Lanka at the first time in 2004 using the data from Household Income and Expenditure survey held in 2002.

The value of OPL in 2002 was Rs. 1,423 (real per capita expenditure per month) and updated for the inflation of prices through the Colombo Consumer Price Index (CCPI) for the survey periods 2002 onwards. According to the average price index values adjusted for HIES survey period DCS publishes Headcount index for each survey periods. The current value of OPL is Rs. 4,166 per person per month for 2016.

5.1 Poverty headcount index and poverty status

Poverty headcount Index is the percentage of population below the poverty line and it is widely used to measure poverty in Sri Lanka.

$$\text{Headcount Index} = \frac{\text{Number of people below poverty line}}{\text{Total population}} \times 100$$

Table 5.1 shows that poverty headcount index is 4.1 percent in 2016 (percentage of population below the official poverty line) at national level.

When compare the sectors, estate sector reports the highest headcount index (8.8 percent) than that of the other two sectors.

Among the districts, Kilinochchi district is reported the highest headcount index (18.2 percent) and the lowest (0.9 percent) reported from Colombo district.

The household, which consist with the members whose per capita expenditure is lower than the value of official Poverty line, consider as a household in poverty.

Table 5.1 shows the percentage of households in poverty by sector, province and district level. Table 5.1 reveals that 3.1 percent of households are in poverty in Sri Lanka in 2016. The highest percentage of households in poverty is reported from Kilinochchi district (15.0 percent) while the lowest percentage is reported from Colombo district (0.6 percent).

Table 5.1: Poverty headcount index and percentage of poor households by sector, province and district - 2016

5.2 Poverty Gap Index

The Poverty Gap Index measures the depth of poverty in a country or region, based on the aggregate poverty shortfall of the people in poverty relative to the official poverty line. Head Count Index is not always sensitive to changes (until changes are done passing the poverty line) in the status of those already below the poverty line. Hence, it is inadequate in assessing the impact of specific policies on the people live in poverty. On the other hand, the Poverty Gap Index increases with the distance of the people live in poverty and thus give a good indication of the depth of poverty.

$$PG = \frac{1}{N} \sum_{i=1}^q \left(1 - \frac{X_i}{Z}\right) I(X_i \leq Z) = \frac{1}{N} \sum_{i=1}^q \left(1 - \frac{X_i}{Z}\right)$$

$$SPGI = \frac{1}{N} \sum_{i=1}^q \left(1 - \frac{X_i}{Z}\right)^2$$

Where,

$I = 1$ if $X_i < Z$

$I = 0$ if $X_i \geq Z$

PG = Poverty Gap

$SPGI$ = Squared Poverty Gap Index

X_i = Real per capita expenditure

Z = Poverty line

q = Poor population

N = Population

5.3 Squared Poverty Gap- (Poverty Severity) Index-SPGI

Squared poverty gap index measure the severity of the people live in poverty. It takes into account the inequality among the people live in poverty. Squared poverty gap index weights the PGI itself. Therefore, it gives more weight to the people live in bottom of the poverty. That was a higher SPGI keeps the person/household further away from the poverty line. Squaring the PG gives greater weight to the PG of the poorest since their PG will be larger value.

Table 5.2 shows poverty gap index was 0.6 percent in year 2016. Estate sector reported highest poverty gap index (1.2 percent) than the other two sectors. Among the districts the highest index was reported from Kilinochchi district (3.4 percent) and lowest is reported from Colombo district (0.2 percent).

Table 5.2 shows the squared poverty gap index and the national SPGI was 0.1 percent in 2016. Among the district, the highest SPGI reported from Kilinochchi district (1.0 percent).

Table 5.2: Poverty gap index and squared poverty gap index by sector, province and district – 2016

5.4 Number of household and people live in Poverty

It is important to consider the number people and households live in poverty for poverty targeting policies and programs. Table 5.3 shows the number of households and people live in poverty and contribution to total poverty with respect to the total number of people live in poverty in Sri Lanka by sector, province and district levels. There were 169,392 households and 843,913 persons live in poverty in Sri Lanka in 2016.

The analysis has until now focused on documenting the estimated poverty rates, but areas with the highest poverty rates do not necessarily contain the largest numbers of people live in poverty. As shown in Table 5.1 and Table 5.3, low poverty rates in populous districts such as Kandy, Ratnapura, Kegalle, and Kurunegala mask a large number of people living under the poverty line. Kandy, for instance, is home to 9.1 percent of the country's population live in poverty even though only 5.5 percent of its population lives under the official poverty line. In contrast, Kilinochchi and Mullaitivu, where estimated poverty rates are very high (18.2 percent and 12.7 percent, respectively), but its collectively account for 3.9 percent of country's population live in poverty.

Table 5.3: Number of households and persons in poverty by sector, province and district – 2016

5.5 Dietary Energy Consumption

Table 5.4 shows the average per-capita dietary energy consumption per day by poverty status and sector, province and district – 2016.

The average per capita dietary energy consumption for Sri Lanka was 2,095 kilocalories per day in 2016. The corresponding figure for the poor was 1,445 kilocalories and for the non-poor were 2,123 kilocalories.

According to the survey results, average per capita dietary energy consumption per day in urban sector reported the lowest value (1,947 kilocalories) than the other sectors.

The highest average per capita dietary energy consumption reported from Hambantota district (2,343 kilocalories) while the lowest reported from Colombo (1,948 kilocalories).

When consider the poverty status among poor, Gampaha district reported the lowest average per capita dietary energy consumption (1,138 kilocalories). While Jaffna district reported the highest average per capita energy consumption (1,743 kilocalories).

Table 5.4: Average per capita dietary energy consumption per day by poverty status and sector, province and district – 2016

15	Bank (Govt. / Private)		
16	Agrarian Service Center		

Section 7.2

		Yes - 1 No - 2
1.	Do you have electricity supply (main line) nearby your area?	
2.	Do you have telephone facilities in your area?	
3.	Do you have pipe borne line (main line) nearby your area?	

Section 8 - Housing Information

1. Type of Structure

Single House - Single Floor	1
Single House - Double Floor	2
Single House - Above double floor	3
Attached house / Annex	4
Flat	5
Condominium / Luxury apartments	6
Twin houses/	7
Line room / row house	8
Slum / Shanty	9
Other (Specify)	99

2. Number of bed rooms

3. Total floor area (Sq. feet)

Less than 100	1
100 - less than 250	2
250 - less than 500	3
500 - less than 750	4
750 - less than 1000	5
1000 - less than 1500	6
1500 - less than 3000	7
3000 & more	9

4. Principle materials of Construction

(A) Wall

Brick	1
Cabook	2
Cement block	3
Pressed soil block	4
Mud	5
Plank / Metal sheet	6
Cadjan / Palmyrah	7
Other (Specify)	9

(B) Floor Other

Cement	1
Teraso / Tile	2
Concrete	3
Mud	4
Wood	5
Sand	6
Other (Specify)	9

(C) Roof

Tile	1
Asbestos	2
Concrete	3
Metal sheet	4
Takaram	5
Cadjan / Palmyrah / Straw	6
Other (Specify)	9

5. Tenure

Constructed / Purchased by an occupant	1
Inherited	2
Freely received / Received as a gift	3
Compensated	4
Rent free (Employer / Other)	5
Relief payment (Employer / Other)	6
Rent	7
Lease	8
Encroached	9
Other (Specify)	99

6. A. Main source of drinking water**Well**

Protected well within premises	1
Protected well outside premises	2
Unprotected well	3

Main tap line

Tap inside home	4
Tap within unit / premises (main line)	5
Tap out side premises (main line)	6

Other

Project in village	7
Tube well	8
Bowser	9
River/ Tank / Streams	10
Rain water	11
Bottled water	12
Other (Specify)	99

B. Distance to take source of drinking water

	Meters	
Within premises	1	
Outside premises	2	

C. Was there enough water to drink, bath & wash during last year ?

	Yes	No
1. Drink	1	2
2. Bath / wash	1	2

7.A Availability of toilet**Within unit**

Exclusive for the household	1
Sharing with another household	2

Outside unit

Exclusive for the household	3
Sharing with another household	4

No toilet to housing unit but sharing with another unit	5
Public toilet	6
Not using toilets	7

B. Type of Toilet

Water seal with Connected to Pit / Tank	1
Water seal with Connected to drainage system / a piped sewer	2
Not water seal	3
Direct Pit	4
Other (Specify)	9

8. Disposal of Garbage

Collected by garbage truck	1
Burned	2
Dumped within premises	3
Process for fertilizer	4
Dumped / Throw away out side premises	5
Other (Specify)	9

9. Principle Type of Lighting

Kerosene	1
Electricity	2
Solar energy	3
Generator / Battery	4
Gas	5
Other (Specify)	9

10. Principle Type of cooking fuel

Fire wood	1
Gas	2
Kerosene	3
Electricity	4
Saw dust / Paddy husk	5
Other (Specify)	9

11. (A) Did any of the household member collect fire wood during last month?

Yes

1
2

 → Go to Q. 12
 No

(B). Distance & place of collecting firewood

	Meters	
Own land	1	
Forest	2	
Other land	3	

12. (A) Was this housing unit affected by any natural disaster during last 12 months?

Yes

1
2

 → Go to Section 9
 No

(B). Nature of disaster

	Yes	No
1. Flood	1	2
2. Drought	1	2
3. Earth slip	1	2
4. Attacked by wild animals	1	2
5. Storm	1	2
6. Other (specify)	1	2

Section 9 - Agricultural Holdings & Livestock

1. Does any member of this household (excluding borders & servants) have owned any land with occupied housing units or agricultural land / lands (Currently cultivating / available to cultivation)?

Yes No → Go to Question 3

2. Land area

	Owned			Cultivated (Rent, lease, joined own, and etc.)		
	1			2		
	A	R	P	A	R	P
1. Paddy land						
2. High land						
3. Land area with occupied housing units						

40 Perches = 1 Rood
04 Roods = 1 Acre.

3. Livestock (Owned)

Category	Yes - 1 No - 2	*Number of livestock (write suitable code)
	1	2
1. Cattle / Buffaloes		
2. Goats / Sheep		
3. Swine (Pigs)		
4. Poultry		
9. Other		

- *
(1) 5 or less than 5
(2) 6 to 10
(3) 11 to 50
(4) More than 50
