Introduction

The Index of Industrial Production (IIP) is an abstract number, the magnitude of which represents the status of production in the industrial sector for a given period of time. The IIP describes changes of the volume of goods and services produced over time. Its main purpose is to provide a measure of the short-term changes in the volume of industrial production from the manufacturing sector in the country. The major advantage of the production index compared to other indicators is the combination of fast availability and detailed breakdown of activities.

Monthly IIP is compiled on provisional basis and the index is revised annually. From the month of January, 2017 monthly IIP is released with a time lag of 42 days.

Since January 2017 the index will carry point to point changes, that is, 2018 August production is compared with the 2017 August production for measuring the changes in industrial production volume.
