

**QUARTERLY REPORT OF THE
SRI LANKA LABOUR FORCE
SURVEY**

FIRST QUARTER - 2009

**DEPARTMENT OF CENSUS & STATISTICS
MINISTRY OF FINANCE AND PLANNING**

Preface

In the past, information on labour force characteristics, employment and unemployment etc. were collected through labour force and socio - economic surveys conducted at five yearly time intervals. However, the employment and unemployment data are required at very short intervals to monitor the programs made in the employment generating policies of the government. Therefore, to satisfy this need, the Department of Census and Statistics (DCS) designed a labour force survey on a quarterly basis, to measure the levels and trends of employment, unemployment and labour force in Sri Lanka on a continuous basis. This survey was commenced from the first quarter of 1990 and this report is the seventy third in the series of quarterly reports published so far.

Current survey concepts and methods are very similar to those introduced at the beginning of the survey in 1990. However, some changes were made over the years to improve the accuracy and usefulness of the data. The significant revisions were made on the labour force survey questionnaire in 2006, and the revised version was introduced for the survey conducted in 2006 first quarter, and it will be used in future as well.

The field work of the survey for the first quarter 2009 was done in January, February and March in year 2009. Even though it was planned to conduct the survey in Northern and Eastern provinces, the survey was not conducted fully due to the prevailing uncertain conditions in districts of Northern province. In first quarter 2009 the survey was conducted in the Eastern province, hence this report consists of data including Eastern province. However for comparison purposes related tabulations have been done (i) excluding Northern and Eastern provinces and (ii) excluding Northern province, separately in this report.

A nationally representative annual sample of about 22,500 housing units have been selected for the survey in 2009. However as mentioned above, the survey was not conducted properly in Northern province as scheduled, so this report is based on a quarterly sample of 5,070 housing units, excluding Northern province providing national level estimates with a stipulated standard errors of labour force characteristics as reported in the reference period of the first quarter 2009.

Acknowledgements

This report is seventy third in the series of the Quarterly Labour Force Survey which was commenced from the first quarter 1990 and is being continued by the Department of the Census and statistics.

Sample Survey Division implemented the Sri Lanka Labour Force Survey programme, under the direction of Mr. G.Y.L. Fernando, Director (2).

Planning and the execution of the survey was done by the staff of the Sample Surveys Division under the supervision of Mr.W.W.M.A.S.Premakumara, Director, Sample Surveys Division.

Field operation activities were organized by Mr. R.A.P. Kumarasinghe, Statistician of the Sample Surveys Division.

The supervision activities were carried out by Mr. Lucky Thangarathnam, Senior Statisticians, and Mr. R.A.P. Kumarasinghe, Mr. I.L.Sherifdeen, Mr. P.A.Subawickrama, Mrs. Chandani Wijebandara and Mr. W. Gnanathilaka, Statisticians, of the sample surveys division and Heads of statistics divisions in each district.

The computer data processing and final tabulations were done by Mrs. W.A.S.M.P. Gunasekara, Mr.T. Thirugnanatheepan Statistical Officers and Mr. M.B.M. Shiras, Statistical Assistant of the Sample Surveys Division, under the supervision of Mr. P.A. Subawickrama, Statistician using Microcomputers.

Developing of sample selection programme and it's related computer software was done by Mr. K.M.R. Wickramasinghe, System Analyst/ Programmer of the sample survey division.

This publication was organized and prepared by Mrs. Chandani Wijebandara, Statistician Sample Surveys Division, assisted by Mrs. W.A.S.M.P. Gunasekara, Statistical officer.

The Data Processing Division, under the direction of Mr. S.A.S. Bandulasena, Deputy Director and under the supervision of Mr. Migara Fernando and Mr. Wasantha Weerasiri, Senior System Analyst/Programmers, was responsible for the survey data entry and preparation of data entry and computer edits programmes. Data entry was decentralized and manual editing, coding & data entry were done by responsible officers at district kachcheries in districts Gampaha, Kalutara, Kandy, Matale, Galle, Matara, Kurunegala, Puttalam, Anuradhapura, Badulla, Ratnapura & Kegalle.

District field staff of the Department who worked on the survey deserve a special word of thanks. They include District Deputy Directors/ Senior Statisticians/ Statisticians and field Statistical Officers, who worked hard at the data collection stage, to make this survey a success.

Printing of the report was done at the Printing Division, under the supervision of Mr. W.C. Weerawansa, Senior Statistician.

Finally, I wish to express my appreciation to all the respondents of the survey for their valuable co-operation.

Appendix 1: Explanatory Notes

Appendix 2: Alternative estimates of employment, unemployment and labour force characteristics

Appendix 3: Survey schedule

Introduction

Sri Lanka Labour Force Survey was designed to measure the levels and trends of employment, unemployment and labour force in Sri Lanka. This survey is being conducted quarterly, since the first quarter of 1990.

The field work of the survey for the first quarter 2009 was done in January, February and March in year 2009. Even though it was planned to conduct the survey in Northern province, the survey was not conducted fully due to the prevailing uncertain conditions in districts of Northern province. In first quarter 2009 the survey was conducted also in the Eastern province, hence this report consists of summary statistics computed by excluding Northern province.

Labour force participation rate

Labour Force: Number of persons who were employed or unemployed during the reference week

Labour force participation rate: Labour force expressed as a percentage of population age 10 yr. & over

Table 1: Economically active population by sex and sector- First Quarter 2009

Sector	Economically active population					
	Total	%	Male	%	Female	%
Total	8160062	100.0	5234755	64.2	2925307	35.8
Urban	873486	100.0	586657	67.2	286829	32.8
Rural	7286576	100.0	4648098	63.8	2638478	36.2

Table 2: Economically Inactive population by sex and sector- First Quarter 2009

Sector	Economically inactive population					
	Total	%	Male	%	Female	%
Total	8408622	100.0	2551075	30.3	5857548	69.7
Urban	1112771	100.0	344463	31.0	768308	69.0
Rural	7295851	100.0	2206611	30.2	5089240	69.8

The survey results revealed that (Table 1), the estimated economically active population (or labour force) is about 8.2 million in first quarter 2009. Of which 64.2 percent are males and 35.8 percent are females. Of the economically inactive population 30.3 percent are males and 69.7 percent are females (Table 2) .

Figure 1 : Distribution of Economically active/Inactive population

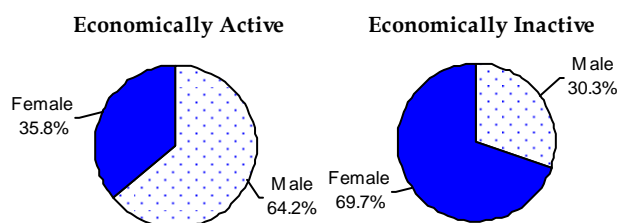

Table 3: Labour Force Participation Rate by sex & year

Year	Labour force participation rate		
	Total	Male	Female
2000	50.3	67.2	33.9
2001	48.8	66.2	31.9
2002	50.3	67.9	33.6
2003	49.7	67.5	32.6
2004	49.6	67.2	33.0
2005	49.3	67.3	32.6
2006	51.2	68.1	35.7
2007	49.8	67.8	33.4
2008	50.2	67.9	34.3
2009 Q1	49.9	67.4	34.3

Table 3 provides the information on labour force participation rates since year 2000. As can be seen from this table, male participation rate for the first quarter 2009 is about 67.4 percent and it is 34.3 percent for females. It is important to note that, male participation to the labour force is as twice as that of females.

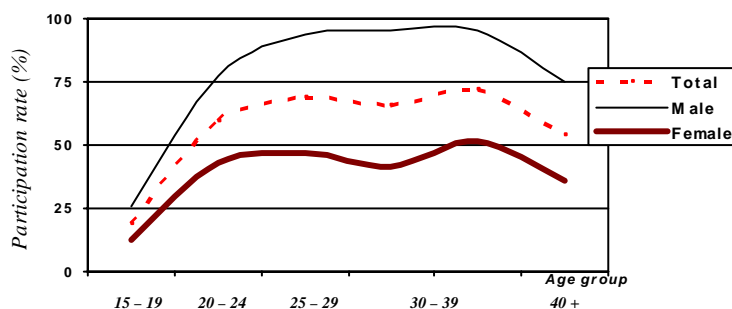

* Excluding Northern & Eastern provinces

Table 4 : Labour Force Participation Rate by age group & by sex - First Quarter 2009

Age group	Sex		
	Total	Male	Female
Total	49.2	67.2	33.3
15 - 24	37.0	48.7	26.2
25 - 29	68.5	93.8	46.8
30 - 39	68.9	95.6	46.2
40+	54.2	75.4	35.6

Table 4 provides the labour force participation rates by sex and age group. Highest male participation rate (95.6) is reported from (30 - 39) age group while female highest participation rate (46.8) reported from age group (25-29).

Figure 2 : Labour Force Participation Rate by age group & sex - First Quarter 2009

Employment

Employed: Persons who are engaged in some kind of work for pay or profit or family gain during the reference week.

Table 5 : Distribution of Employed population by main industry, (First quarter 2008 – First Quarter 2009

Year	Total	Major industry group		
		Agriculture	Industries	Services
Jan-Feb-Mar 1st Qtr - 2008	7581163 100.0	2410307 31.8	1989655 26.2	3181201 42.0
April-May-June 2nd Qtr - 2008	7563981 100.0	2264792 29.9	2068786 27.4	3230403 42.7
July-Aug-Sept. 3rd Qtr - 2008	7735132 100.0	2665917 34.5	2000537 25.9	3068678 39.7
Oct-Nov-Dec 4th Qtr - 2008	7712943 100.0	2617910 33.9	1960544 25.4	3134489 40.6
Jan-Feb-Mar 1st Qtr - 2009	7709784 100.0	2613350 33.9	1894279 24.6	3202155 41.5

Note: The tabulation groups based on ISIC (Rev.3) are indicated as A,B,C.....Q..

Agriculture

1. Agriculture (A)
2. Forestry and Fishery (B)

Industries

1. Manufacturing (D)
2. Construction (F)
3. Mining & Quarrying (C)
4. Electricity, Gas and Water supply (E)

Services

1. Wholesale and Retail Trade, Repair of Motor Vehicles, Motorcycles and Personal and Household Goods (G)
2. Hotels and Restaurants (H)
3. Transport, Storage and Communication (I)
4. Financial Intermediation and Real Estate, Renting and Business Activities (J,K)
5. Public Administration and Defence, Compulsory Social Security (L)
6. Education (M)
7. Health and Social work (N)
8. Other Community, Social and Personal Service Activities (O)
9. Private Households with Employed Persons (P)
10. Miscellaneous Labour work
11. Extra Territorial Organizations & bodies (Q)
12. Industries not adequately described

Table 5 shows the percentage distribution of employed population by main industry from first quarter 2008 to first quarter 2009. The total number of employed persons in Sri Lanka is estimated as about 7.7 million in first quarter 2009. Of which, about 41.5 percent engaged in services sector employment, and 33.9% in agriculture sector.

When the distribution of employment between first quarter 2008 to first quarter 2009 is compared agriculture sector shows a marked increase in its relative importance, and for the service sector it is the opposite.

Table 6 : Percentage distribution of employed population by employment status and Agriculture/ non- agriculture sector - First Quarter 2009

Employment Status	Total		Sector			
			Agriculture		Non Agriculture	
	No.	%	No.	%	No.	%
Total	7709784	100.0	2613350	33.9	5096434	66.1
Employee	4403504	100.0	730122	16.6	3673382	83.4
Public	1231034	100.0	166729	13.5	1064305	86.5
Private	3172470	100.0	563394	17.8	2609076	82.2
Employer	201201	100.0	39563	19.7	161638	80.3
Own account worker	2210692	100.0	1180929	53.4	1029763	46.6
Unpaid family worker	894387	100.0	662735	74.1	231652	25.9

Table 6 shows that, about 83.4 percent of total paid employees are engaged in non-agricultural sector activities, while this percentage is only 16.6 percent for the agriculture sector. Further, about 82.2 percent of private sector paid employees are involved in non-agricultural activities, while this share is 17.8 percent regarding the agricultural activities.

It is important to see that, about 74.1 percent of unpaid family workers are in the agriculture sector, and the balance, 25.9 percent are in the non-agriculture sector.

Note (1): Please see the explanatory note under 'labour force' link in the DCS web site www.statistics.gov.lk for detailed concepts & definitions.

Table 7 : Distribution of Employed population by main industry & by sex - First Quarter 2009

Major industry group	Total	Sex	
		Male	Female
Total	100.0	65.1	34.9
Agriculture	100.0	61.9	38.1
Industry	100.0	65.2	34.8
Services	100.0	67.6	32.4

It is seen in the above table that, about 67.6 percent of services sector employment are males.

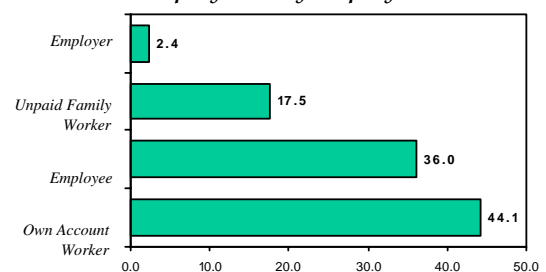

Table 8 : "Informal sector" employment by Agriculture/ Non-agriculture sector - First Quarter 2009**

Sector	Total	Agriculture	Non-agriculture
Total	100.0	100.0	100.0
Formal	38.4	13.7	51.0
Informal	61.6	86.3	49.0

It is also important to see the distribution of the employed population according to the formal and informal sector classification. Table 8 shows that, 61.6 percent of the total employment is in the informal sector. Further 86.3 percent of the agriculture sector employment is in informal sector, while it is about 49 percent for non agriculture sector.

Further, 44.1 percent of those employed in the informal sector are own account workers, while 36.0 percent of them are paid employees. (Figure 3).

Figure 3 : Percentage Distribution of informal sector employment by Employment status

Underemployment ⁽¹⁾

Table 9 : Underemployment rate by sex - First Quarter 2009

Rate	Sex		Economic sector		Total
	Male	Female	Agriculture	Non-agriculture	
Underemployment rate	3.0	5.3	5.1	3.2	3.8

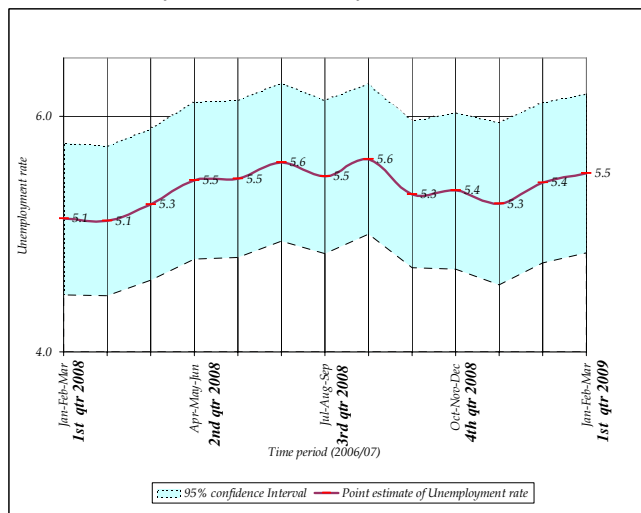

Table 9 reveals that, underemployment rate is higher for females than males. And also it is higher in the agriculture sector than as that of in non-agriculture sector.

Unemployment

Unemployment Rate : The number of unemployed persons as a percentage of the labour force

Unemployed : Persons who are seeking and available for work, but had no employment during the reference period

Figure 4 : Unemployment rates and its 95% confidence intervals (2008 Jan. -Dec./ 2009 Jan. - Mar.)

The number of unemployed persons is estimated as about 450,000 during the first quarter 2009.

The unemployment rate for the first quarter 2009 is reported as 5.5 percent (Excluding Northern province).

As seen in figure 4, it is very important to note that, there is no statistically significant difference between the unemployment rates reported in different time periods of 2008/2009, when sampling error⁽²⁾ is considered.

Table 10 : Unemployment rate by level of education First Quarter 2009

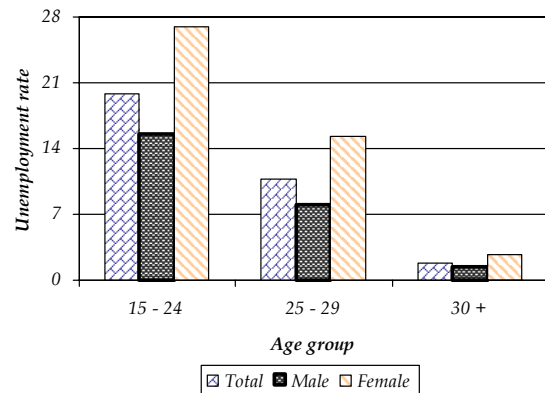

Level of Education	Unemployment rate		
	Total	Male	Female
Total	5.5	4.2	7.9
Below G.C.E. (O/L)	3.4	2.8	4.6
G.C.E. (O/L)	9.3	7.4	12.8
G.C.E. (A/L) & above	10.6	7.8	13.4

Table 11: Unemployment rate by age group and sex – First Quarter 2009

Age group	Total	Sex	
		Male	Female
Total	5.5	4.2	7.9
15 - 24	19.8	15.5	27.0
25 - 29	10.7	8.1	15.3
30 +	1.9	1.4	2.8

Figure 5 : Unemployment rate by age group and sex – First quarter 2009

As can be seen from table 11, the unemployment rate reported for females is 7.9 percent and 4.2 percent for males. Youth unemployment rate (15 - 24 yrs) reported for first quarter 2009 is 19.8. Highest unemployment rates is reported from age group (15 - 24 yrs), for both males (15.5) and females (27.0). Further the survey results reveal that the unemployment is severe among females than that of males, in all age groups.

The highest unemployment rate is reported from the G.C.E(A/L) and above group which is about 10.6 percent. That is 7.8 percent and 13.4 percent for males and females respectively. This shows that the problem of unemployment is more acute in the case of educated females than educated males (Table 10).

Table 12: Literacy rate by sex & sector

Sex & sector	1 st quarter 2008	1 st quarter 2009
Total	92.1	91.4
Male	93.8	93.1
Female	90.6	90.0
Urban	95.5	94.9
Rural	92.4	91.7
Estate	76.0	75.3

Literacy ⁽³⁾

Table 12 shows that, during the first quarter of 2009, the literacy rate is about 91.4, and also the male literacy rate (93.1) is higher than that of females (90.0). Further, the survey results reveal that literacy level of estate sector (75.3) is relatively lower than urban (94.9) and rural (91.7) sectors.

⁽²⁾ Sampling error :

When a sample, rather than the entire population, is surveyed, estimates differ from the true population values they represent. This difference, or sampling error, occurs by chance, and its variability is measured by the standard error of the estimate. **For more details, please refer the explanatory note on the labour force link in the DCS website.**

⁽³⁾ Please see the explanatory note under 'labour force' link in the DCS web site www.statistics.gov.lk for detailed concepts & definitions.

Explanatory Notes

Coverage

Sri Lanka Labour Force Survey was designed to measure the levels and trends of employment, unemployment and labour force in Sri Lanka. This survey is being conducted quarterly, since the first quarter of 1990.

This quarterly survey of households is conducted through a scientifically selected sample designed to represent the civilian non-institutional population. Respondents are interviewed to obtain information about the employment status etc. of each member of the household 10 years of age and older.

The field work of the survey is done during the third week of the each month, Monday through Sunday. This is known as the "survey week". The inquiry relates to activity or status are referred in the preceding week of the survey week; referred to as the "reference week".

The concepts and definitions underlying labour force data are as follows.

Concepts and definitions

1. **Labour force** : The labour force is composed of the economically active population 10 years of age and over.
2. **The Economically Active Population** : is defined as those persons who are/were employed or unemployed during the reference period of the survey.
3. **Employed** : Persons, who during the reference period, worked as paid employees, employers, own account workers (self employed), or unpaid family workers are said to be employed. This includes persons with a job but not at work during the reference period.
4. **Unemployed** : Persons who are seeking and available for work, but had no employment during the reference period.
5. **Currently Economically Active** : A person who was employed or unemployed during the current reference period is considered to be currently economically active.
6. **Not in the Labour Force (not economically active)** : Persons who were neither working not available/looking for work are classified as "not in the labour force". Persons are not in the labour force for such reasons as: full time care of the household, full - time students, retired or old age, infirmed or disabled, or are not interested in working for one reason or another. Current and Usual definitions apply.
7. **Criteria for classification of underemployment**

In order to classify an employed persons as visibly underemployed,

(i) If the person has worked less than the normal duration in his/her main activity

In Sri Lanka scenario, 35 hours per week is taken as the cut-off point applicable to all workers, except government teachers. As in practice, though teachers do have a normal duration of work which is below the general cut-off point, they should be on a full time schedule according to the nature of their job. Further, those who do have a secondary job, or those who are employers, were considered as having worked the normal duration in their respective activity.

Therefore, if the person has worked less than the normal duration in his/her activity (as described above), then the person is further questioned to ascertain whether he/She is prepared and available for further work if provided. Such persons are considered underemployed in their respective employment.

(ii) If the person has worked more than the normal duration in his/her activity

If the person has worked even more than 35 hours as usually, but he has worked less than 35 hours actually in the reference period, only due to the off season or bad weather, such persons were also further questioned to check their underemployment situation, considering them as a special category.

8. Informal Sector Employment

In order to classify a person to be employed in informal sector employment, following information were used.

- (i) Registration of the organization
- (ii) Accounts keeping practices of the organization
- (iii) Total number of regular employees of the organization.

Reliability of the estimates

Statistics based on the quarterly labour force data are subject to both sampling and non-sampling errors. When a sample rather than the entire population is surveyed, there is a chance that the sample estimates may differ from the "true" population values they represent.

The exact differences, or sampling error, varies depending on the particular sample selected, and this variability is measured by the standard error of the estimate. There is about a 95 percent chance, or level of confidence, that an estimate based on a sample will differ by no more than 1.96 standard errors from the "true" population value, because of sampling error. Analyses relating to the Labour Force Survey are generally conducted at the 95 percent level of confidence.

For example, the confidence interval for the quarterly unemployment rate is on the order of ,

Estimated value (of the unemployment rate) \pm (standard error) * (1.96)

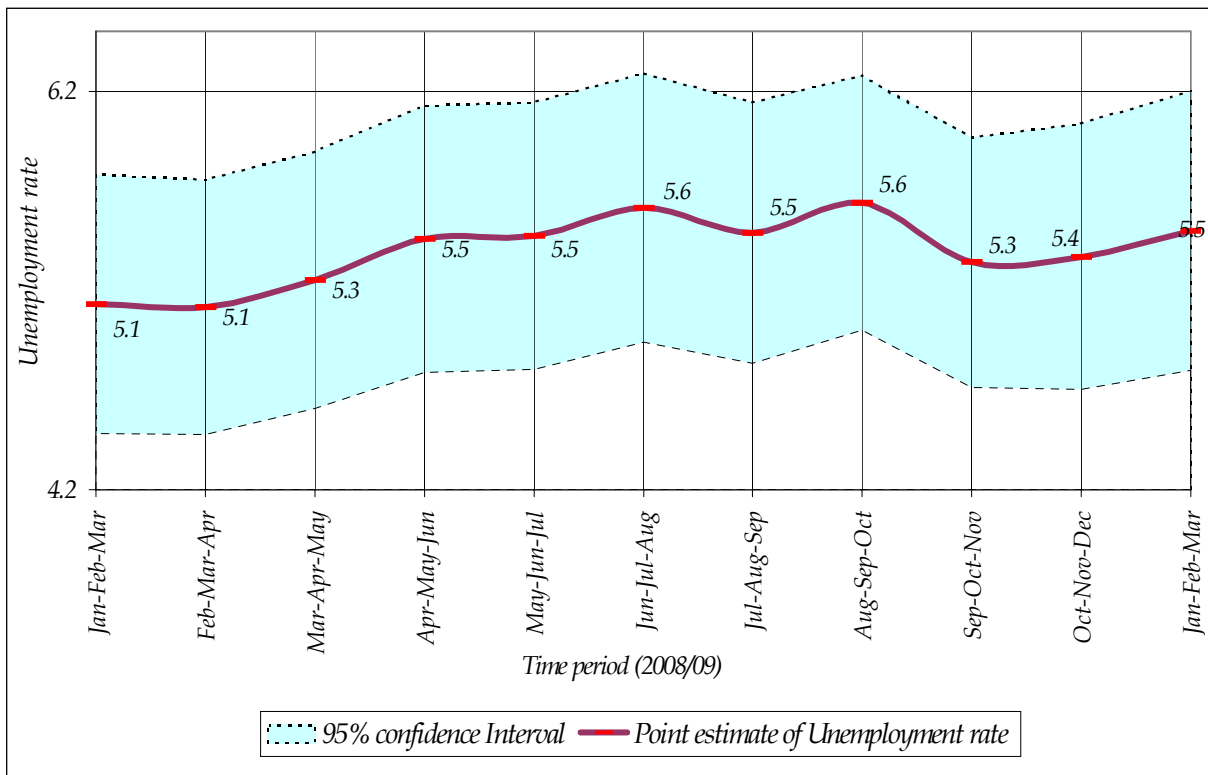

6.4 \pm (0.4) * (1.96)

(6.4 \pm 0.784)

This means, the 95 percent confidence interval on the quarterly unemployment rate could range from (5.6 to 7.2) . This implies that there is about 95 percent chance that the "true" unemployment rate lies within this interval. This range includes all the values range from 5.6 to 7.2 . When the comparison of this estimate is done between two quarters, if any of the value within the 95 percent confidence interval of one quarter overlaps with the confidence interval of the other , it means that the estimates of this two quarters *are not significantly different*.

Therefore, in each quarterly labour force report, a separate table is given including approximate standard errors for some selected variables, so that users could understand this statistical scenario clearly.

Unemployment rates and it's lower and upper limits (2008 Jan-2009 Mar)

As shown in the given figure, it is very clear that, there is no statistical significant differences between the quarterly unemployment rates reported in 2006, (since all the 95 percent confidence intervals overlap) when sampling error is considered.

Change in survey schedule

Current survey concepts and methods are very similar to those introduced at the beginning of the survey in 1990. However, some changes have been made over the years to improve the accuracy and usefulness of the data.

Beginning in January 2006, some improvements were made to the labour force survey schedule in order to fulfill the requirements of it's users and also to provide additional information for the planning purposes. This revision was made focusing on literacy, household economic activities, and informal sector employment and under employment etc.

Note :

It is important to note that, all the data published here are the estimates based on a sample survey and these are subject to sampling errors. These sampling errors can be statistically evaluated from the survey results. Therefore, sampling error is normally measured in terms of the standard error of the particular variable. Standard error could be used to calculate the confidence limits with a prescribed accuracy where the true value of the estimates lies.

Further reliability of the estimates can be expressed in terms of Coefficient of Variation (CV). The CV is a relative measure of the sampling error and is calculated as sampling error divided by the expected value of the given characteristic.

In view of this, following table is given to show the estimates for some selected variables, it's standard error, CV and 95% Confidence interval.

It is also important to note that all the estimates we publish in this report are subject to sampling error and one should be cautious in the interpretation of results, especially with respect to the trends over time.

Alternative Estimates of Employment, Unemployment and Labour Force Characteristics

◆ Official employment, unemployment and labour force characteristics are estimated at the Sri Lanka Labour Force Survey, based on the internationally comparable concepts and definitions recommended by the ILO. However the validity of the concepts and definitions used at the survey is questioned very often in some forums, for the appropriateness of these concepts and definitions in the Sri Lankan context.

The concepts and definitions, which were found to be controversial are as below.

(1) Number of Hours of Work :

A person who work **at least one hour** during the reference week, is considered **employed**, under these definitions.

(2) Working Age Population :

All persons of **age 10 years and over** are considered to be in the working age.

(3) Employment Status :

All, a) Paid employees, (those who work for wages/salaries).

b) Employers (who have at least one paid employee under them).

c) Own account workers (who carry out the economic activity without having any paid employees).

d) Unpaid family workers (who make their contribution to the economic activities carried out by their own household, without wages/salaries).

The validity of the above concepts and definitions is raised due to the following reasons.

(1) **Number of hours of Work** : Some point out that **one hour per week** is too low, to consider a person to be employed.

(2) **Working age Population** : Some point out that persons in the age group 10-14 yrs. are too young to consider to be in the working age.

(3) **Employment Status** : Some point out that 'unpaid family workers' may work in the family enterprise **without payment** because they have no other work, and so it is not appropriate to consider them as **employed**.

An attempt has been made to produce '**Alternative estimates of Employment, Unemployment and Labour Force Characteristics**,' by revising the original concepts and definitions so that the above issues are addressed as explained below.

The revisions made are,

(1) Number of Hours of Work :

Persons who work **20 hours or more per week only** are considered to be employed.

(2) Working Age Population :

Persons who are **over 15 yrs of age only** are considered to be in the working age.

(3) Unpaid Family Worker :

Unpaid family workers are **not** considered as employed. Those unpaid family workers who were reported to be seeking some other work are considered as **unemployed** and the rest of the unpaid family workers are considered as **economically inactive** (not in the labour force) so only, **a) paid employees b) employers and c) own account workers are considered to be employed**.

Following tables are based on the above alternative concepts and definitions.
