## Paddy Statistics –2022 Yala Season

The total paddy production in the country is estimated as a product of the average yield that is estimated through a sample survey and the extent harvested, which is based on a complete enumeration of all paddy parcels.

In order to estimate the average yield, 2851 experiments were conducted during the season.

Paddy statistics at block level for Mahaweli areas namely Mahaweli ‘B’, ‘C’, ‘G’, ‘F’ and ‘Udawalawe’ area are also published in this report.

Distribution of sown extent by various aspects of paddy cultivation such as method of land preparation, application of fertilizer, use of insecticides, etc. are included in table 19 through table 28. These statistics have been compiled based on the data collected from 12,130 paddy growing parcels.

*Average yields are estimated as means of districts average yields*

The sown extent under paddy cultivation during 2022 Yala season was 481,669 hectares. Out of which 297,519 hectares (61.8%) was reported under major irrigation schemes, 116,588 hectares (24.2%) under minor schemes and 67,562 hectares (14.0%) under rainfed. The largest extent of paddy cultivated was reported in Ampara district, (62,686 hectares) which is 13% of the total extent of paddy cultivated in the country.

The harvested extent during this season was estimated to be 480,289 hectares and it is about 99% of the sown extent.

### **Average Yield**

### **Ownership**

Nearly 81% of the sown extent during 2022 Yala season was under the “Singly Owned” category of ownership. Another 10% and 5% were under “Ande” and “Joint” ownership categories respectively.

### **Method of Land Preparation**

Nearly 97% of the sown extent has been prepared for cultivation by using tractors. Sown extent that had been prepared for cultivation using buffaloes and using mamoties was about 3% of the total sown extent. Although, land preparation by buffaloes ploughed was most commonly (52%) used in Nuwaraeliya district.

### **Method of Sowing**

Broadcasting is the most popular method of sowing and that has been used in 95% of the sown extent. Although parachute method for sowing is most popular in Nuwaraeliya district and the percentage was estimated to be 63% of total extent.

### **Use of Fertilizer**

The uses of both organic & chemical fertilizers have been applied in about 71% of the sown extent. The use of only organic fertilizers was 17% and the use of only chemical fertilizers was 10% of the sown extent.

### **Use of Insecticides and Weedicides**

Insecticides had been applied in about 41% of the total sown extent and weedicides had been applied when land preparation was about 31%. The corresponding percentage for type of weeding was higher in “using weedicides” (74%). “Hand weeding” was use 14% in total for type of weeding and “Hand weeding” was most popular in Nuwaraeliya district (93%) and Kandy district (76%).
